Nuclear structure physics is undergoing a major revival, full of activities and excitement. On the experimental side, this is being made possible by advances in detector technology and accelerator capabilities that give access to data and nuclei (especially exotic nuclei far from stability) never before accessible. On the theoretical side, new concepts, ideas and computational techniques are advancing our understanding of effective interactions, nucleonic correlations, and symmetries of structure. This volume covers a broad range of topics on nuclear structure, including collective excitations, proton–neutron excitation modes, phase transitions, signatures of structure, isospin, structure at both high and low angular momenta, recent developments in nuclear theory, the vast new realm of exotic nuclei far from the valley of stability, and the latest technological advances of detectors and facilities which will lead this branch of physics into the future. Contents: New Class of Dynamic Symmetries (F Iachello)Real Photon Scattering Close to the Neutron Threshold (A Zilges et al.)Decay Out of a Superdeformed Band (H A Weidenmüller)Recent Developments of the Nuclear Shell Model (T Otsuka)Aspects of Nuclear Structure at Low Isospin (D D Warner)Isovector Valence Shell Excitations in Heavy Nuclei (N Pietralla)Structure of Nuclei Beyond the Dripline (M Thoennessen)Applications of High Resolution Gamma Spectroscopy in Low Energy Nuclear Structure Research (H G Börner et al.)Clusterization and Composite Symmetries (J Cseh)Recent Results from the Mistral Mass Measurement Program at Isolde (M de Saint Simon et al.)Big Bang Entropy (G S Ioannidis & C Syros)Phase Instabilities in Nuclear Matter and Droplet Formation (R Ogul & U Atav)and other papers Readership: Researchers, academics, graduate students and post-docs in nuclear physics. Keywords:Nuclear Structure;Detector Technology;Accelerator;Exotic Nuclei;Effective Interactions;Nucleonic Correlations;Symmetries of Structure;Nuclear Theory;Dynamic Symmetries

The book will be a step-by-step guide showing the readers how to build a complete web app with AngularJSJavaScript developers who want to learn AngularJS for developing web apps. Knowledge of JavaScript and HTML is expected. No knowledge of AngularJS is required.

This Book concentrates the available knowledge on rotating fluid flow and heat transfer in porous media in one single reference. Dr. Vadasz develops the fundamental theory of rotating flow and heat transfer in porous media and introduces systematic classification and identification of the relevant problems. An initial distinction between rotating flows in isothermal heterogeneous porous systems and natural convection in homogeneous non- - isothermal porous systems provides the two major classes of problems to be considered. A few examples of solutions to selected problems are presented, highlighting the significant impact of rotation on the flow in porous media.

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

The cult classic comedy returns in this graphic novel! Senior year is gonna be flippin' sweet! Napoleon is dating Deb, training at a new dojo, and his best friend, Pedro, is student body president. But the good times might not last when a fellow student accuses Pedro of cheating in the election. Can Napoleon and Deb use their special skills to clear their friend before the principal can IMPEACH PEDRO? Maybe, gosh, get off his back!
