2006 TANK 250 Touring by: Scott I purchased my scooter used from a dealer with 1,100 showing on the odometer and it had been wrecked. Needless to say I got it cheap. I am a mechanic, so I knew I would have no trouble working on it. The first thing I did was remove every panel on it and inspect everything. It needed a lot of work!

Train is a glorious celebration of all things train and track, tracing the history of the railroad and the role of trains, from the first steam engines to today's high-speed bullet trains. Featuring DK's trademark brilliant photography, Train catalogs the development of trains from early steam to diesel engines and electric locomotives, explores in detail iconic trains such as the Fairy Queen, Orient Express, and Javelin, and chronicles the cultural backdrop against which railroads were built around the world.

Traces the author's Pacific Coast motorcycle trek from Alaska to the far end of Argentina, a journey during which she shared whimsical misadventures with a series of fellow bikers, bribed her way through Central America, and spent a night in a Mexican brothel. 20,000 first printing.

The inclination towards two wheelers is not newer to the world. From the very beginning, two wheelers are recognized as a mark of triumph, independence and joy. These are considered fast, safe and easy mode of transportation with worthy fuel economy. With the arrival of automation and electronics in two wheelers, the study gained more momentum, which led Two and Three Wheeler Technology to emerge as a new discipline of automobile engineering. The book explains traditional and modern technologies in an easy to understand manner. Various technologies have been explicated with appropriate 2D and 3D diagrams to support learning. Text comprises the state-of-the-art developments in the field of two wheelers. Detailed explanation on the actual assemblies helps the students to cognize the technology systematically. Although the emphasis has been given to the two wheeler technology, considering the requirement of various syllabi, the last chapter is solely dedicated to three wheeler technology. Chapter-end review questions help students in preparing them for examination by self-assessment method. Primarily designed for the undergraduate and diploma students of automobile engineering, the lucid and simple presentation of the book makes it useful for the commoner, who has keen interest in this area. It is a useful guide for a vehicle owner for understanding mechanism and parts, which may help him in maintaining his vehicle at best efficiency.

A vision of custom motorcycles

Vespa and Lambretta remain the two most iconic motor scooter brands, even four decades after the latter's demise. But what made them such a European sensation in the postwar era? And why were they particularly popular in Britain in the 1950s and '60s? Motor scooter expert Stuart Owen explains the rise of Innocenti's Lambretta and Piaggio's Vespa, from the wartime ruins of Italy, through years of plenty as the two manufacturers exploited a ready market for affordable, economic transport, and then their decline into more uncertain times as motor cars trespassed on their success. He also explores the rich history of accessorising and customising the scooters, their essential role in the mod movement, and the revival in Vespa's fortunes following the release of the cult film Quadrophenia.

If you're red-blooded and somewhere between 35 and 50 the chances are that your first bike was a sports moped. This book takes you on a nostalgic full throttle trip back to the heady days of the 1970s and early 80s when these fabulous little superbikes were available to 16 year-olds. Packed with photos from past and present, this book will revive wonderful memories of the machines, the people, the fashions, and even the music of the time. Includes coverage of AJW, Batavus, Casal, Cimatti, Derbi, Fantic, Flandria, Garelli, Gilera, Gitane, Honda, Kreidler, KTM, Malaguti, Motobecane, Negrini, NVT, Puch, Suzuki, Testi, Yamaha and Zundapp.

Contributions by Surhid Gaotam and Lit-Mian Chan. This book presents a state-of-the-art review of vehicle emission standards and regulations and provides a synthesis of worldwide experience with vehicle emission control technologies and their applications in both industrial and developing countries. Topics covered include: * The two principal international systems of vehicle emission standards: those of North America and Europe * Test procedures used to verify compliance with emissions standards and to estimate actual emissions * Engine and aftertreatment technologies that have been developed to enable new vehicles to comply with emission standards, as well as the cost and other impacts of these technologies * An evaluation of measures for controlling emissions from in-use vehicles * The role of fuels in reducing vehicle emissions, the benefits that could be gained by reformulating conventional gasoline and diesel fuels, the potential benefits of alternative cleaner fuels, and the prospects for using hydrogen and electric power to run motor vehicles with ultra-low or zero emissions. This book is the first in a series of publications on vehicle-related pollution and control measures prepared by the World Bank in collaboration with the United Nations Environment Programme to underpin the Bank's overall objective of promoting transport that is environmentally sustainable and least damaging to human health and welfare.

The Complete Idiot's Guide to Motorecycles, Fourth Edition, is the most complete book on motorcycles, covering everything from how to choose and maintain a motorcycle and how to buy appropriate gear, to how to ride safely, and how to make the most out of trips on the open road.

The urge has found you daydreaming more than once. The urge to define, bend, shape, fabricate, invent, shove, break. To slide your leg over the seat you finally got back from the leather shop. To twist back the throttle grip you wrapped yourself. To lunge into the darkness of an open highway on a creation all your own. More than a motorcycle, this is about your identity. It's about building something as unique as you are. In The Build, Robert Hoekman Jr compiles insights from today's best builders to help you plot out your own beautiful beast. Loaded with photos, The Build features firsthand advice from the masters of moto design, including John Ryland (Classified Moto), Alan Stulberg (Revival Cycles), Jared Johnson (Holiday Customs), Jarrod DelPrado (DP Customs), and the legendary Max Hazan (Hazan Motorworks). You've seen what can be done. It's time to do it yourself. Get The Build.
