Revised to include an improved balance of material on using and creating financial information, this 11th edition of the text provides examples from real-world companies and integrates comprehensive accounting problems throughout the book.

Forms for the practical applications described in the text, available separately.

Accounting: What the Numbers Mean, 6e, by Marshall/McManus/Viele is written to meet the needs of those students who will not be accountants but who do need to understand accounting, the language of business, in order to effectively participate in activities such as planning, control, and decision-making. Marshall takes readers through the basics: what accounting information is, what it means, and how it is used. In using this text, students examine financial statements and discover what they do and do not communicate. This enables them to gain the crucial decision-making and problem-solving skills they need in order to succeed in a professional environment.

Solid financial information and the ability to use that information successfully in business today differentiate the

truly exceptional from the ordinary. Now you can guide your students in developing the understanding and skills to make them true winners in business with the proven, balanced blend of procedure and concepts in the latest edition of Albrecht/Stice/Stice's FINANCIAL ACCOUNTING. Organized around business activities, FINANCIAL ACCOUNTING, 10th Edition presents the procedural detail necessary for students to learn the mechanics of preparing accounting information, with an emphasis on how to analyze and use what they are learning to make informed decisions. This edition's lively writing style, packed with a wealth of examples from leading companies, helps students discover, first-hand, the effects and importance of financial accounting information. Designed to address a diversity of learning styles and career needs, the book offers expanded coverage as well as basic material in each chapter--giving you the flexibility to explore in-depth any topics you choose. Streamlined chapters build a strong, practical context around the procedures of accounting with powerful student-oriented learning features and a new, innovative online ThomsonNOW[®] teaching and learning system that helps prepare your students for accounting success, no matter what their career choices or future plans.

This work takes a real-world, single focus company approach in every chapter. The decision-making focus shows the relevance of financial accounting regardless of whether the student has chosen to major in accounting.

This text is intended for a first course in introductory financial accounting. It was updated to reflect current International Financial Reporting Standards (IFRS). For example, it reflects the recent change in IAS38, para. 98, allowing the use of multiple methods in amortizing

intangible assets. It focuses on core Introductory Financial Accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. Excluded are advanced topics that are covered in Intermediate Financial Accounting, such as leases and bond amortization. The text takes a corporate approach (vs. beginning with a sole proprietorship emphasis and then converting to a corporate approach); this consistency throughout the book reduces confusion for the introductory student. The book covers all essential topics: the accounting cycle, merchandising, assigning costs to inventory, cash and receivables, property, plant and equipment, debt financing, equity financing, statement of cash flows, financial statement analysis, and proprietorships and partnerships. Additionally, this version of the open text is supported by Lyryx Learning, offering at an affordable price editorial services to develop and adapt the content, formative online assessment, course supplements, and daily support to both the students and instructors.

The text and images in this book are in grayscale. A hardback color version is available. Search for ISBN 9781680922929. Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced

through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.
