ASME B30.11 : Monorails and Underhung Cranes

Following approval by the ASME B16 Standards Committee, and after public review, ASME B16.48-2010 was approved by the American National Standards Institute on September 2, 2010. In this 2010 edition, all paragraphs have been redesignated, all tables have been revised, and cross-references have been updated throughout.

ASME issued its first standard, Code for the Conduct of Trials of Steam Boilers, in 1884. This paper evolved into Rules for the Construction of Stationary Boilers and for Allowable Working Pressure—the first edition of ASME’s now-legendary Boiler and Pressure Vessel Code (BPVC)—issued in 1914 and published in 1915.

ASME Boiler and Pressure Vessel Code

B31.3 is one of ASME’s most requested codes. It serves as a companion to ASME’s B31.1 Code on Power Piping as well as to the other codes in ASME’s B31 series. Together, they remain essential references for anyone engaged with piping.

B31.3 - Process Piping - ASME

ASME B31.3-2010 Process Piping. There is a newer edition of this document available. ASME has been defining piping safety since 1922. ASME B31.3 contains requirements for piping typically found in petroleum refineries; chemical, pharmaceutical, textile, paper, semiconductor, and cryogenic plants; and related processing plants and terminals.

ASME B31.3-2010 - Process Piping

The ASME Standards Collection. ASME is the leading international developer of codes and standards associated with the art, science, and practice of mechanical engineering, starting in 1914 with the first issuance of its legendary Boiler & Pressure Vessel Code.

Pressure Vessel Code, Section VIII, Division 3, 2010 Edition with the 2011 Addenda. It is intended to be used as a companion to Division 3 by Manufacturers and Users of high-pressure vessels, and will also provide guidance to Inspectors, materials suppliers, and others.

Companion Guide to the ASME Boiler and Pressure Vessel ... In the 2010 edition, the divisor "weld bead length" units were shown as "[in/min]" in one formula and "[in (min)]" in the other. Both should have read [in. (mm)]. This correction was by errata which means that it is retroactive.

This is a fully revised and updated fourth edition of a classic guidebook. It covers the current requirements of the ASME Section VIII-1 as well as the requirements of the newly published VIII-2 .Whether you are a beginning design engineer or an experienced engineering manager developing a mechanical integrity program, this updated volume gives you a thorough examination and review of the requirements applicable to the design, material requirements, fabrication details, inspection requirements effecting joint efficiencies, and testing of pressure vessels and their components. Guidebook for Design of ASME Section VIII Pressure Vessels provides you with a review of the background issues, reference materials, technology, and techniques necessary for the safe, reliable, cost-efficient function of pressure vessels in the petrochemical, paper, power, and other industries. Solved examples throughout the volume illustrate

the application of various equations given in both Sections VIII-1 and VIII-2.
