regulation or fire rating purposes. Setup The Smoke Density Chamber setup consists of a compartment with a light source on one end, a photosensor opposite the light source, and a burner to ignite the sample material. As the material is ignited by the burner, smoke fills the room, obscuring the light emitted by the light

File Type PDF

Astm E 662

ASTM E662 is a type of smoke density test or smoke generation test that is used to examine the smoke generation properties of coatings, construction products, materials, and textiles. It's often used for the construction industry, railroad industry, and for the military sector.

Related Tests . The
