*Engine and
Powertrain Testing*

A powertrain is a
system of mechanical

parts in a vehicle that first produces energy, then converts it in order to propel it, whether it be an automobile, boat or other machinery. The average person is most familiar with the powertrain of their car, which creates energy in the engine, which is transferred to the transmission.

Today's automotive management teams are often working within legacy structures across organisational silos, leading to duplicated functions, multiple platforms and divided effort. Change is difficult enough to

File Type PDF

Automotive

manage at the best of times, but when you have multiple changes happening across multiple divisions of your organisation, it compounds into something far more complex.
