One of the most fascinating periods of history must certainly be around the time of Daniel the prophet's time (sixth and fifth centuries B.C.). It was then that many of the philosophies that were to exert a telling influence on Western thought and Christianity arose. This is the period when Buddha, Confucius, Lao-Tzu, Zoroaster and Pythagoras developed their ideas. In this book, we consider the coded messages written by Daniel and later by the apostle John (preserved in the Bible). History offers outstanding confirmation of the accuracy of their predictions. We indicate how past and developing world events fit into the fabric of prophecy.

This study is the product of a long view of space exploration and the conversations about space in China. It locates the multiple conversations about space exploration and utilisation as they are in the Peoples' Republic of China (PRC), within other conversations about space culture in the world. China is viewed by Western researchers through many lenses which are examined here critically. In previous studies, writers explain away China's space programme with the easy answers of a "Space Race" and a "China Threat", in which the space programme is seen as merely an example of global competition, or threat, but this thesis challenges those barriers to Western understanding of the Chinese public conversation of space culture. In this study, critical theory and an underlying epistemology within a post-Enlightenment cultural frame are applied to official, archival and ephemeral texts and images. The manner of the critical application is

distinguished from derivate techniques operationalised as Open Source Intelligence. The concept of Place, and within that, Foucault's linguistic concept of "Heterotopia", is significant both in understanding the Chinese overseas space bases on Earth and the temporal and spatial dislocations experienced in space missions. In acknowledging the interpretative approach, an empirical study, a "Q-sort" has been carried out, which demonstrates that the key factor in the Chinese conversation is Science, within the context of modernisation, tempered by Chinese cultural affirmation and international co-operation. The thesis concludes by providing general principles in future work for successful research into the popular culture of space exploration.

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. *A Wrinkle in Time*, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem.
