Working in Mumbai is a critical reflection on thirty years of the practice of RMA Architects. Rahul Mehrotra weaves a narrative to connect his multiple engagements in architectural practice, including teaching, research, documenting, writing and exhibiting since the establishment of the practice in 1990. The book is structured around the subjects of interior architecture, critical conservation, and work and living spaces that straddle the binaries of the global and the local as well as the rural and the urban. While the book is a portfolio of the selected works of RMA Architects, the projects are curated so as to unravel and clarify the challenges faced by architects in India and in several parts of the 'majority' world where issues related to rapid urbanization and the impacts of global capital are among the many that dispute conventional models of practice. Working in Mumbai is used emblematically to interrogate the notion of context and understand how the practice evolved through its association with the city of Bombay/Mumbai.

Friction is a major issue in both the production of textiles and in the finished product. This authoritative book reviews how friction occurs and the ways it can be measured and controlled. The book begins by looking at how friction can be defined and how the structure and properties of textile fibres lead to friction behaviour. It also discusses slip-stick phenomena in textiles and

Download Ebook Ci6x Series X Rite

ways of measuring friction in yarns and fabric. The second part of the book reviews friction in particular textiles, including cotton, wool and synthetic fibres as well as woven fabrics. These and other chapters also discuss ways of controlling friction, including fabric finishes and lubricants. With its distinguished editor and contributions from some of the world's leading authorities in the subject, Friction in textile materials is a standard reference for the textile industry and those researching this important topic. An authoritative review of friction, its management and control

In spite of all the efforts made in fire prevention and suppression, every year about 45 000 forest fires occur in Europe, burning ca. 0.5 million hectares of forests and other rural lands. The management of these burned forests has been given much less attention than fire prevention or fire suppression issues, but the post-fire management of burned areas raises strong concerns (economic and social impacts, soil erosion and water quality, biodiversity loss, forest restoration). Although there are a few publications which address post-fire management, the focus of these has been either on general approaches to restoration or specific topics such as preventing post-fire soil erosion. This book is about the post-fire management of fire-prone forest types in southern Europe. It provides the first comprehensive overview of the topic, ranging from stand-level to landscape-level management, and from emergency actions to long-term restoration approaches.

Since the publication of the first edition, important developments have emerged in modern mushroom biology and world mushroom production and products. The relationship of

Download Ebook Ci6x Series X Rite

mushrooms with human welfare and the environment, medicinal properties of mushrooms, and the global marketing value of mushrooms and their products have all garnered great attention

This book will focus on lignocellulosic fibres as a raw material for several applications. It will start with wood chemistry and morphology. Then, some fibre isolation processes will be given, before moving to composites, panel and paper manufacturing, characterization and aging.
