Dying 10-year-old goldfish is nursed back to health by kind soul. Like every other pet, a goldfish could feel neglected if their owner does not show that they are taking care of them. Replacing the tank's dirty water and feeding them every day is one thing, but owners also need to show them that they are loved.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Florence Nightingale is famous as the "lady with the lamp" in the Crimean War, 1854—56. There is a massive amount of literature on this work, but, as editor Lynn McDonald shows, it is often erroneous, and films and press reporting on it have been even less accurate. The Crimean War reports on Nightingale's correspondence from the war hospitals and on the staggering amount of work she did post-war to ensure that the appalling death rate from disease (higher than that from bullets) did not recur. This volume contains much on Nightingale's efforts to achieve real reforms. Her well-known, and relatively "sanitized", evidence to the royal commission on the war is compared with her confidential, much franker, and very thorough Notes on the Health of the British Army, where the full horrors of disease and neglect are laid out, with the names of those responsible.

"Nurses play a vital role in improving the safety and quality of patient car -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nurseshdtk>.

Revised edition of the best-selling memoir that has been read by over a million people worldwide with translations in 29 languages. After too many years of unfulfilling work, Bronnie Ware began searching for a job with heart. Despite having no formal qualifications or previous experience in the field, she found herself working in palliative care. During the time she spent tending to those who were dying, Bronnie's life was transformed. Later, she wrote an Internet blog post, outlining the most common regrets that the people she had cared for had expressed. The post gained so much momentum that it was viewed by more than three million readers worldwide in its first year. At the request of many, Bronnie subsequently wrote a book, The Top Five Regrets of the Dying, to share her story. Bronnie has had a colourful and diverse life. By applying the lessons of those nearing their death to her own life, she developed an understanding that it is possible for everyone, if we make the right choices, to die with peace of mind. In this revised edition of the best-selling memoir that has been read by over a million people worldwide, with translations in 29 languages, Bronnie expresses how significant these regrets are and how we can positively address these issues while we still have the time. The Top Five Regrets of the Dying gives hope for a better world. It is a courageous, life-changing book that will leave you feeling more compassionate and inspired to live the life you are truly here to live.

In this Doctorate of Nursing Practice-Family Nurse Practitioner (DNP-FNP) scholarly project, a yoga program was developed and implemented to educate how the practice of yoga can utilized to manage and prevent back pain in nurses. Back pain in nurses is a common condition that can cause nurses to become unable to work and ultimately affect the nursing work unit. The practice of yoga has gained popularity in Western culture for improving health and back pain. A review of the recent research literature from 2000-2015 that investigated back pain in nurses, back pain management, treatment, and yoga, is provided to determine if yoga could be utilized as an effective modality for back pain management. Jean Watson's Human Caring Society theory of nursing was the theoretical framework used to help guide the exploration of this topic. Seven of the eight DNP Essentials set forth by the AACN were directly fulfilled through this project and are explained. The implications and importance of this project has for the clinical work of an Integrated Nurse Practitioner are provided.

The U.S. Bureau of Labor Statistics recently calculated nearly 60,000 musculoskeletal injuries to healthcare workers resulting from heavy lifting during attempts to move patients. Often the nurses, aides, orderlies, and attendants who suffered permanent injuries were forced out of the profession, straining an already inadequate pool of workers and

What if there are tangible ways that - in your everyday life - you can ease your fibromyalgia? What if ... There is more to your fibromyalgia picture than you currently suspect? Rather than looking forward at 'what may occur' throughout any disease development, you look backward down the road you've traveled, treating and correcting the string of dysfunctional patterns that have resulted from, contributed to, and may have actually determined your current condition? The way you routinely sit or stand influences the diseases your body develops? The foods you eat every day could be triggering your pain patterns and disease development? Inadequate supplies of necessary, everyday nutritional substances is fostering and/or expanding your symptoms? Consumption of our common everyday foods is triggering your fatigue patterns? Changing and correcting your structural patterns, saturating your body with its basic, fundamentally needed nutrients and changing the source of foods that create pain in your body could have your pain patterns hitting the door of 'nothingness' within an average of 7 - 14 days? Would you pay attention? These statements are true. Research over the last 15 years has given our patients a track record of being able to return to their lives, PAIN FREE! Pain free... and knowing HOW to keep themselves that way. Fibromyalgia does not have to be a 'forever' diagnosis. Structural and nutritional care changed the lives of Tammy and Pamela, only two of the wonderful patients we've have the honor to watch returning to their lives after years of narcotic dependence, pain and fatigue.

Covering the full range of nursing interventions, Nursing Interventions Classification (NIC), 6th Edition provides a research-based clinical tool to help in selecting appropriate interventions. It standardizes and defines the knowledge base for nursing practice while effectively communicating the nature of nursing. More than 550 nursing interventions are provided --- including 23 NEW labels. As the only comprehensive taxonomy of nursing-sensitive interventions available, this book is ideal for practicing nurses, nursing students, nursing administrators, and faculty seeking to enhance nursing curricula and improve nursing care. More than 550 research-based nursing intervention labels with nearly 13,000 specific activities Definition, list of activities, publication facts line, and background readings provided for each intervention. NIC interventions Linked to 2012-2014 NANDA-I Diagnoses promotes clinical decision-making. New! Two-color design provides easy readability. 554 research-based nursing intervention labels with nearly 13,000 specific activities. NEW! 23 additional interventions include: Central Venous Access Device Management, Commendation, Healing Touch, Dementia Management: Wandering, Life Skills Enhancement, Diet Staging, Weight Loss Surgery, Stem Cell Infusion and many more. NEW! 133 revised interventions are provided for 49 specialties, including five new specialty core interventions. NEW! Updated list of estimated time and educational level has been expanded to cover every intervention included in the text.

Awarded third place in the 2017 AJN Book of the Year Awards in the Psychiatric and Mental Health Nursing Category. Get a full understanding of today's psychiatric nursing practice in less time! Essentials of Psychiatric Mental Health Nursing, 3rd Edition offers the perfect balance of essential nursing interventions and clinical content paired with current research and evidence-based practice to fully equip you for today's field of mental health nursing. This new edition continues to retain the reader-friendly style, emphasis on therapeutic communication, and the nursing process organization that was successful in the previous edition. It also includes additional DSM-5 disorders, illustrations of various neurobiology disorders, a new neurobiology learning tool, and new NCLEX review questions to help you pass your course and thoroughly prepare for the psychiatric nursing section of the NCLEX. REVISED! Examining the Evidence boxes explain the reasoning behind nursing interventions and how research affects everyday practice. UNIQUE! Applying the Art sections in the clinical chapters provide examples of therapeutic and nontherapeutic communication techniques as well as realistic nurse-patient interaction scenarios. Chapter review questions reinforce essential content from the chapter. Critical thinking questions introduce clinical situations in psychiatric nursing. Nursing Interventions tables familiarize readers with interventions for a disorder that they will encounter in clinical practice. Key concepts and terms clarify essential terminology. Vignettes offer succinct, real-life glimpses into clinical practice by describing patients and their psychiatric disorders. Assessment Guidelines familiarize readers with methods of assessing patients. Potential Nursing Diagnosis tables give several possible nursing diagnoses for a particular disorder along with the associated signs and symptoms. DSM-5 diagnostic criteria identifies medical diagnostic criteria for psychiatric disorders for integration into the nursing plan of care. Important contributions from psychiatric mental health nursing pioneers are featured in the opening unit pages. Cultural Considerations sections reinforce the principles of culturally competent care. Key Points to Remember outline the main concepts of each chapter in an easy to comprehend and concise bulleted list. Appendices feature the DSM-5 Classifications and a list of the latest NANDA-I diagnoses for readers' reference.
