Use of inotropes in critical care CO = HR * SV The SV (stroke volume) depends on the SVR (afterload) and the "preload". Preload (the degree to which ventricles are stretched before contracting) correlates with the end diastolic volume (the volume of blood in a ventricle at the end of filling). It is important to optimise preload by

Use of inotropes in critical care

members of the UKCPA Critical Care Group. Since then it has become a widely used information source in UK hospital pharmacies. It is, as far as I am aware, the only document of its type in existence. The majority of the information on minimum volumes cannot be supported except by the anecdotal experiences of the contributing pharmacists.

Critical Care Clinics updates you on the latest trends in patient management, keeps you up to date on the newest advances, and provides a sound basis for choosing treatment options. Published four times a year—in January, April, July, and October—each issue focuses on a single topic in critical care, including cardiac emergencies, sepsis, infectious diseases, shock and trauma, neurologic problems, toxicology, pulmonary disorders, intensive care procedures, and patient observation.

Critical Care Clinics - Journal - Elsevier

Critical Care is a high-quality, peer-reviewed, international clinical medical journal. Critical Care aims to improve the care of critically ill patients by acquiring, discussing, distributing, and promoting evidence-based information relevant to intensivists. Critical Care aims to provide a comprehensive overview of the intensive care field.

Critical Care | Home page

Perhaps the best-known example of a care bundle in use throughout most intensive care units in the developed world is the sepsis care bundle, based on the Surviving Sepsis campaign. 6 This collaborative international campaign promotes information through its website and through publication of recommendations in the major critical care journals. This initiative has been widely criticized ...

Critical care preparation and management in the COVID-19 pandemic. 17 March 2020. As the UK enters the 'Delay' phase, hospitals can take action to prepare for super-surge capacity and the peak in demand for invasive mechanical ventilation. Outlined below are both operational and clinical guidance.

Critical care — ICM Anaesthesia COVID-19

Gastric residual volume (GRV) is considered a surrogate parameter of GI dysfunction during the progression of enteral feeding in the early phase of critical illness and beyond. By monitoring GRV, clinicians may detect patients with delayed gastric emptying earlier and intervene with strategies that minimize or prevent VAP as one of the major risks of EN.
