In 1967, Canada celebrated the 100th anniversary of its founding with a spectacular party, and the whole world was invited. Montreal's Expo 67 was the first world's fair held in Canada, and it was a huge success, attracting over 50 million visitors. The 1,000-acre site was built on two man-made islands in the St. Lawrence River and incorporated 90 futuristic pavilions created by some of the world's greatest architects and designers. Over 60 countries were represented, along with many private, corporate and thematic pavilions, all brought together under the theme "Man and his World." With performers and entertainers of all varieties, restaurants, cultural attractions, exhibitions and a world-class amusement park, Expo 67 was literally the party of the century, exceeding all expectations.

Do you know how to think like an architect? Do you know why you should? How do you make sure that you have the critical thinking tools necessary to prosper in your academic and professional career? This book gives you the answers. Architects have a valuable and critical set of multiple thinking types that they develop throughout the design process. In this book, Randy Deutsch shows readers how to access those thinking types and use them outside pure design thinking – showing how they can both solve problems but also identify the problems that need solving. To think the way the best architects do. With a clear, driving narrative, peppered with anecdote, stories and real-life scenarios, this book will future-proof the architectural student. Change is coming in the architecture profession, and this is a much-needed exploration of the critical thinking skills that architects have in abundance, but that are not taught well enough within architecture schools. These skills are crucial in being able to respond agilely to a future that nobody is quite sure of.

Interweaving architecture, philosophy and cultural history, Materials and Meaning in Architecture develops a rich and multi-dimensional exploration of materials and materiality, in an age when architectural practice seems otherwise preoccupied with image and visual representation. Arguing that architecture is primarily experienced by the whole body, rather than chiefly with the eyes, this broad-ranging study shows how the most engaging built works are as tactile as they are sensuous, communicating directly with the bodily senses, especially touch. It explores the theme of 'material imagination' and the power of establishing 'place identity' in an architect's work, to consider the enduring expressive possibilities of material use in architecture. The book's chapters can be dipped into, each individual chapter providing close readings of built works by selected modern masters (Scarpa, Zumthor, Williams and Tsien), insights into key texts and theories (Ruskin, Loos, Bachelard), or short cultural histories of materials (wood, brick, concrete, steel, and glass). And yet, taken together, the chapters build to a powerful book-length argument about how meaning accrues to materials through time, and about the need to reinsert the bodily experience of materiality into architectural design. It is thus also, in part, a manifesto: arguing for architecture to act as a bulwark against the tide of an increasingly depersonalised built environment. With insights for a wide range of readers, ranging from students through to researchers and professional designers, Materials and Meaning in Architecture will cause theorists to rethink their assumptions and designers to see new potential for their projects.
