The vehicle: a 2010 Dodge Ram 3500. Under the hood is a 6.7-liter, 350-horsepower 6-cylinder diesel made by Cummins. It might seem odd to use a 350-horsepower truck as a manual-transmission instruction vehicle, but the Ram is actually very forgiving.

Maybe because the Cummins in the 3500 is tuned differently from the 4500 and 5500 and maybe horsepower is a variable in Tow Ratings? I stopped by a Ram Dealership once and took a the C&C models. With C&C look for yourself and see the difference between the 3500 Series C&C components (Brakes rotors driveshaft ect) and the 4500 and 5500 series ...

The only big difference I see between 3500 and 5500 is the payload and axle. Payload in 5500 is twice as much compared to 3500 and axle is 4.88 compared to 4.10. But maximum towing capacity is the same on both trucks, 3500 has more horse powers with the same engine (cant figure out why is that) and 5500 will of course be less fuel efficient.
