Peter DeJong and Insoo Kim Berg's INTERVIEWING FOR SOLUTIONS features a proven, solutions-oriented approach to basic interviewing that views clients as competent, helps them to visualize the changes they want, and builds on what they are already doing that works. Throughout the book, the authors present models for solution-focused work, illustrated by examples and supported by research. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

A screenshot of some of the most rapidly evolving fields in Neonatology and Pediatrics with articles reviewing some metabolic dysregulations as well as non-oncologic diseases that may occur in infancy, childhood, youth. The illustrative material with original photographs and drawings highlighting some pathogenetic concepts are keystones of this book.

Nothing about Dutch graphic design duo Mevis & van Deursen conforms to type. Praised for their innovative but clear presentation, they have designed everything from artist's books for Gabriel Orozco and Rineke Dijkstra to an official government stamp commemorating the marriage of Dutch Crown Prince Willem-Alexander, based on the number two, since the wedding date was 02-02-02. This book represents a range of work from the past 15 years, mostly books but also posters and smaller pieces. However, the artists have chosen not simply to present the work again but to make it new through collage and reinterpetative interplay, thus "recycling" their innovative designs.

This new kind of dictionary reflects the use of " rhythm rhymes " by rappers, poets, and songwriters of today. Users can look up words to find collections of words that have the same rhythm as the original and are useable in ways that are familiar to us in everything from vers libre poetry to the lyrics and music of Bob Dylan and hip hop groups.

In MiniMax Interventions, Manfred Prior presents therapeutic communication strategies that are designed to achieve a lot with just a few linguistic alterations: maximum results for minimal effort. These tried-and-tested communication strategies can be used in an effective way by any therapeutic practitioner, in almost any kind of session. The step-by-step methods can make a huge contribution to helping patients and clients solve their problems and clarify their goals more quickly. They are easy to understand and put into practice and, as such, their profound effect will be readily observable. It takes a lot of time and experience to condense such a lot of information into such a short book, and such powerful transformative effects into short therapeutic phrases. Manfred Prior has studied the speech patterns of successful communication in psychotherapy, medicine and counselling for more than 30 years. As one of the most renowned hypnosis instructors in the German-speaking world, he has taught effective communication techniques and methods to psychotherapists, doctors and dentists since the mid-eighties. For the first time, his insights are now available in the English-speaking world. The book, originally published in German as the bestselling MiniMax-Interventionen: 15 minimale Interventionen mit maximaler Wirkung, is translated by Professor Paul Bishop. MiniMax interventions provide the basis for efficient communication as well as human encounter. They help reduce resistance from patients or – more precisely – do not let it build up. They strengthen the relationship between therapist and patient and build motivation and willingness to cooperate. Finally, they demonstrate time and again how a few short words can have long-lasting therapeutic consequences. Suitable for psychotherapists, counsellors, supervisors, coaches and organisational consultants. If you want to improve your communication skills in a decisive yet practical way this succinct, accessible book is for you.

High-speed Photodiodes in Standard CMOS Technology describes high-speed photodiodes in standard CMOS technology which allow monolithic integration of optical receivers for short-haul communication. For short haul communication the cost aspect is important , and therefore it is desirable that the optical receiver can be integrated in the same CMOS technology as the rest of the system. If this is possible then ultimately a single-chip system including optical inputs becomes feasible, eliminating EMC and crosstalk problems, while data rate can be extremely high. The problem of photodiodes in standard CMOS technology is that they have very limited bandwidth, allowing data rates up to only 50Mbit per second. High-speed Photodiodes in Standard CMOS Technology first analyzes the photodiode behaviour and compares existing solutions to enhance the speed. After this, the book introduces a new and robust electronic equalizer technique that makes data rates of 3Gb/s possible, without changing the manufacturing technology. The application of this technique can be found in short haul fibre communication, optical printed circuit boards, but also photodiodes for laser disks.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

"The video vortex reader is the first collection of critical texts to deal with the rapidly emerging world of online video-from its explosive rise in 2005 with YouTube, to its future as a significant form of personal media." -- Back cover.

Is The Wire better than Breaking Bad? Is Cheers better than Seinfeld? What's the best high school show ever made? Why did Moonlighting really fall apart? Was the Arrested Development Netflix season brilliant or terrible? For twenty years-since they shared a TV column at Tony Soprano's hometown newspaper-critics Alan Sepinwall and Matt Zoller Seitz have been debating these questions and many more, but it all ultimately boils down to this: What's the greatest TV show ever? That debate reaches an epic conclusion in TV (THE BOOK). Sepinwall and Seitz have identified and ranked the 100 greatest scripted shows in American TV history. Using a complex, obsessively all-encompassing scoring system, they've created a Pantheon of top TV shows, each accompanied by essays delving into what made these shows great. From vintage classics like The Twilight Zone and I Love Lucy to modern masterpieces like Mad Men and Friday Night Lights, from huge hits like All in the Family and ER to short-lived favorites like Firefly and Freaks and Geeks, TV (THE BOOK) will bring the triumphs of the small screen together in one amazing compendium. Sepinwall and Seitz's argument has ended. Now it's time for yours to begin!

Laboratory experiments are a vital part of engineering education, which historically were considered impractical for distance learning. This book presents a guide for the practical employment of a heattransfer virtual lab for students and engineers. Inside, the authors have detailed this virtual lab which is designed and can implement a real-time, robust, and scalable software system that provides easy access to lab equipment anytime and anywhere over the Internet. They introduce and explain LabVIEW in easy-to-understand language. LabVIEW is a proprietary software tool by National Instruments, and can
