This collection constitutes an examination of Schumpeter's legacy that is wider than any yet attempted. As one of the key economists of the twentieth century, Schumpeter's economics is viewed in the context of its relation to purer Austrian theories of the free market, Keynesian macroeconomics, the early neoclassicism of Marshall and Walras, and a persuasive argument made for its centrality to the discipline as a whole.

This title was first published in 2003. Over the decades, experiential methods have become an established research tool in environmental economics. Economists working in this area have realised that experimental methods from economics and other disciplines such as psychology and decision theory can be applied to gain insight into the behavioral underpinnings of environmental policy. Economic experiments, in the lab and field, are an attractive tool to address the incentive and contextual questions that arise in environmental policy. Experiments have been and continue to be designed to capture the key elements of market and non-market choices to test theory, for pattern recognition, to testbed new institutions, and to value public goods, including environmental protection. This volume collects the most significant papers in the literature that identify the underpinnings of experimental approaches are complemented by works that specifically address the use of experimental economics to identify choice under risk, conflict, cooperation, environmental policy instruments, and environmental valuation

Water is becoming an increasingly scarce commodity in many parts of the world. Population growth plus a growing appetite for larger quantities of cheap water quality as a result of urban, industrial, and agricultural pollution coupled with increasing environmental demands have further reduced usable suppliers. This book brings together thirty of the best economic articles addressing water scarcity issues within the US and Mexico. By touching on a number of different issues, this volume clearly articulates the need for improving existing institutional arrangements as well as for developing new arrangements to address growing water scarcity problems.

In this fourth edition of his textbook E. Wayne Nafziger analyzes the economic development of Asia, Africa, Latin America, and East-Central Europe. This comprehensive and clearly written text explains the growth in real income per person and income disparities within and between developing countries. The author explains the reasons for the fast growth of Pacific Rim countries, Brazil, Poland, and (recently) India, and the increasing economic misery and degradation of large parts of sub-Saharan Africa. The book also examines China and other post-socialist economies as low- and middle-income countries, without, however, overshadowing the primary emphasis on the third world. The text is replete with real-world examples. The exposition emphasizes the themes of poverty, inequality, unemployment, the environment, and deficiencies of people in less developed countries. The guide to the readings, through bibliography, and websites with links to development resources makes the book useful for students writing research papers.

Includes general and summer catalogs issued between 1878/1879 and 1995/1997.

Effective asset-liability management (ALM) of a financial institution requires making informed strategic and operational decisions. Ever more important in the wake of the corporate bailouts and collapses of the financial crisis, ALM encompasses the formulation, implementation, monitoring, and revision of strategies, often on a daily basis due to the fast-moving nature of the related risks and constraints. This approachable book features up-to-date practitioner and academic perspectives to provide you with the knowledge you need. Key foundation information is backed up by the latest research and thought leadership to form a comprehensive guide to ALM for today and into the future, with case studies and worked examples. Detailed coverage includes: * Successful risk management frameworks * Coherent stress-testing * Modeling market risk * Derivatives and ALM * Contingency funding to manage liquidity risks * Basel III capital adequacy standard * Investment management for insurers * Property and casualty portfolio management * Funds transfer pricing * Problem loan modeling
