As the glucose forms from the enzyme activity, it will diffuse out through the membrane because it is small enough to fit through the mesh of the membrane. However, the amylase and the starch will stay inside the dialysis tubing because these molecules are too large to fit through the mesh.

*Enzymes and Their Functions - Activity Sheets*

Enzyme activity increases with increasing temperature, until it becomes hot enough to denature the protein (enzymes are proteins), then the activity would cease. Enzymes have an optimum pH where they function the best. Higher or lower pH than the optimum slows the rate of activity. 3. Take a look around your house and identify household products that work by means of an enzyme. Name the products, and indicate how you know they work with an enzyme. (2 pts)

Bellwork: cut out your pieces (enzymes, substrates, and products) on the last page of your enzyme cut-out activity. Agenda: . Enzyme cut-out activity/notes; Objectives: Define the term catalyst as a substance that increases the rate of a chemical reaction and is not changed by the reaction Define enzymes as proteins that function as biological catalysts

*Blog Archives - Ms. Schultz | Science & Biology*

The enzyme is then able to react with more of the substrates. The enzyme is shaped so that it will only react with a specific substrate. The substrate must fit into the enzyme for the reaction to occur. Purpose: Your job will be to cut out, manipulate, glue and explain the reactions that are occurring with the pieces provided.
