Ford Kent Engine Specs - e13components.com

The Kent engine is named, per Ford tradition, for the engine plant where it was produced: The Ford engine plant in the city of Kent in England. Engines in the Kent family have a chain-driven camshaft that rides in the block, and a rocker-arm valvetrain located on top of the cylinder head (OHV stands for Over-Head Valve).

Ford 4-Cylinder Engines: Identifying the 1600 and 2.0L ...

This engine was introduced in the Ford Mk2 Cortina and differs from the earlier units by having the carb on the left and the exhaust on the right - hence, 'crossflow.' They also varied from Pre-X/Flows in that the combustion chamber was shifted from the head to the bowl of the piston and were know as BIP engines (Bowl In Piston).

Ford Kent Crossflow Tuning Guide - Burton Power

This engine was introduced in the Ford Mk2 Cortina and differs from the earlier units by having the carb on the left and the exhaust on the right - hence, 'crossflow.' They also varied from Pre-X/Flows in that the combustion chamber was shifted from the head to the bowl of the piston and were know as BIP engines (Bowl In Piston).

Cosworth increased its association with Ford in 1969, by developing a double overhead camshaft (DOHC) 16-valve inline four-cylinder engine for road use in the Ford Escort. Working from the Kent block, Cosworth created a 1,601 cc for homologation purposes. The camshafts were driven by a toothed belt, hence the name BDA, literally meaning "Belt Drive, A type". Running in Group 2 and Group 4 on either rallying or touring car racing, this engine could be enlarged to a maximum of 2,000 cc.

In 1969 Cosworth developed the "BDA" for Ford , also a four valve head based on the crossflow engine that went on to win countless races and rallies. Ford last used the Kent based engine for motorsport in 1986 in the Group B RS200 that relied on a turbocharged version of the BDA called the BDT producing over 800bhp.
