HUMAN GROWTH AND DEVELOPMENT

Development of the human body is the process of growth to maturity. The process begins with fertilization, where an egg released from the ovary of a female is penetrated by a sperm cell from a male. The resulting zygote develops through mitosis and cell differentiation, and the resulting embryo then implants in the uterus, where the embryo continues development through a fetal stage until birth. Further growth and development continues after birth, and includes both physical and psychological de

What is it that determines what sort of person we become? Is a child ’ s future personality already determined at birth, or is a newborn baby like a blank sheet, waiting to be written on by life? Is our personality determined by anything, or do we choose for ourselves who we are, create ourselves out of nothing? This bestselling introduction to emotional, psychological, intellectual and social development throughout the lifespan will help you explore these questions and many more. Written for students training for careers in the helping professions, including nurses, social workers, occupational therapists, teachers and counsellors, the book covers topics which are central to understanding people whether they are clients, service users, patients or pupils. Following the shape of a human life, beginning with birth and ending with death, it combines theoretical concepts and reflective learning to help you develop an understanding of what makes human beings grow and change over their lives to inform your decisions and professional practice.

A practically focused guide to effective counseling of all clients Human Development Across the Life Span is a practical guide to human growth and development, moving beyond theory to include real-world applications for counselors who work with clients. Written by recognized authorities in mental health counseling and counselor education, this book is fully aligned with the American Counseling Association's accreditation standards and includes contributions by well-known and respected academics and practitioners. Based on an extensive review of course syllabi across CACREP-accredited programs, this book is organized to follow the way courses are typically taught and follows a consistent structure including pedagogical elements that help students learn. After a thorough examination of essential concepts and theories of life span development, the book moves through each stage of human growth and development to provide expert insight, short case studies, and practical applications to counseling. The full Instructor's package provides a useful set of tools, including a Respondus test bank, PowerPoint slides, and an Instructor's Manual. This book is the only text on human growth and development that emphasizes the key implications and applications for counselors, providing useful information and the insights of real experts in each subject area. Understand the developmental milestones at each life stage Appreciate clients' perspectives to better facilitate appropriate interventions Work more effectively with clients of any age, from toddlers to seniors Tailor your approach to meet the unique needs and abilities of each life stage As a counselor, you cannot approach a child's therapy the same way you approach an adult's. Even within each major category, each developmental stage includes a nuanced set of characteristics that, considered appropriately, will inform a more effective treatment plan. Human Development Across the Life Span is a comprehensive guide to understanding all of your clients, and providing the type of counseling that facilitates more positive outcomes.

Social workers work with people at all stages of life, tackling a multitude of personal, social, health, welfare, legal and educational issues. As a result, all social work students need to understand human growth and development throughout the lifespan. This introductory text provides a knowledge base about human development from conception to death. It is designed to encourage understanding of a wide range of experiences, including some very difficult ones, such as child abuse, the developmental trajectories of children in care, mental distress, the experience of people with dementia, the experience of torture victims and untimely bereavements. Using engaging narratives to illustrate real-life situations, the author analyses them to demonstrate the link between theory, and different theoretical approaches, and practice. Packed with case studies, this student-friendly book includes overviews, summaries, questions and further reading in each chapter as well as a more formal academic section designed to challenge and intrigue students. A reference section contains a glossary and overviews of the principal theories discussed throughout the book. It is an essential read for all social work students.

One morning in 1969, out of the blue, I received a letter which both distressed and astonished me. It was from a Prof. S. R. Das in Calcutta, who requested me to accept, for eventual analysis, a mountain of anthropometric data he had accumulated, as he was ill and did not expect to survive to analyse it himself. The data provided the astonishment; twenty-two anthropometric characters recorded every six months or a year, over a period of 14 years, in a mixed longitudinal study of some 560 children, aged six months to twenty years. Most were in families with siblings also in the study, and every child was measured every time by S. R. Das himself. The archive was unique, combining the personal anthropometry of R. H. Whitehouse in the Harpenden Growth Study and the family approach of the Fels Growth Study. This was a study of which neither I, nor anyone of my acquaintance, had heard. Even in India, Prof. Das' work was scarcely known. It turned out Das was a scholarly man, quiet and unassuming, absolutely committed to his Sarsuna-Barisha Growth Study,just the obverse of the professional showman. Clearly this was not a request I could refuse, although I already had in hand enough projects to occupy Siva himself.

Understanding the way in which individuals develop before birth, as babies, children and adolescents through to young and older adulthood towards death is an important part of any social work role. Being able to skilfully apply this understanding in real life practice situations is even more important, as purposeful translations of human development are at the heart of effective professional practice. Introducing students to emotional, psychological and social developmental theories of human growth before exploring in detail how these theories can be incorporated into practice, this book will ensure students have all the tools they need to not only understand but critically appraise and apply psychosocial theories early on in training and whilst on placement. With the help of real world case studies, summaries and tips for further study, it will show students how life course theories inter-relate and how they can make appropriate, purposeful translations of theory into skilled, professional practice.

What does it mean to be human? This critical text from a well-respected author captures and interrogates the many models which have been developed to explore and explain human behaviour. Informed by sociological, psychological and biological perspectives, the book plots the key stages of the life course from childhood through to older age.
