Incomplete dominance in genetics, such as that reflected in skin color, creates an "intermediate phenotype", or a mixture of the genes' expression. In contrast, codominance in genetics, like in AB...

Codominance and incomplete dominance? - Answers
Closely related to incomplete dominance is codominance, in which both alleles are simultaneously expressed in the heterozygote. We can see an example of codominance in the MN blood groups of humans (less famous than the ABO blood groups, but still important!). A person's MN blood type is determined by his or her alleles of a certain gene.

Incomplete dominance, codominance & multiple alleles ...
Incomplete dominance and codominance are two types of genetic inheritance, and while both are variants on the standard dominant/recessive traits, it's important to know the difference between incomplete dominance and codominance. Incomplete dominance is when the phenotypes of the two parents blend together to create a new phenotype for their offspring.
