International Construction Arbitration Law Second Revised ...

International Arbitration in Construction. While arbitration is still regarded by construction companies as the preferred process for resolving disputes on international construction projects, there is scope for improved efficiency and flexibility at all stages of the arbitral process. That is particularly so for disputes valued at USD10m or less, where the cost of the process is often seen as a barrier to justice and the fair resolution of the dispute.

International Arbitration in Construction

International Construction Arbitration Law. By Jane Jenkins and Simon Stebbings. Kluwer Law International, 2006. ISBN 98044110234105. 452pp. including tables and index. Hardback. 1130/£92/US\$166. HUMPHREY LLOYD This is the first volume in a new series aptly called "Arbitration in Context". It is particularly welcome for two reasons.

International Construction Arbitration Law.

International Arbitration: Law and Practice (Second Edition) provides a comprehensive coverage of the basic principles and legal doctrines, and the practice, of international arbitration. It contains a systematic and concise treatment of all aspects of the arbitral process, including international arbitration agreements, international arbitral proceedings and international arbitral awards.

International Arbitration: Law and Practice, Second Edition

Matthew Bell, Construction Law International "Bailey has once again created a practical epic, establishing himself as a virtuoso of construction law on an international scale. The second edition, like the first, is a friend to construction law, written as a guide to the field's ins-and-outs and a tool to navigate its halls.

The International Centre for Dispute Resolution® (ICDR), the international division of the American Arbitration Association (AAA), was established in 1996 to provide the same high-quality alternative dispute resolution (ADR) services available in the U.S. to individuals and organizations around the globe. The ICDR's expertise in the administration of international arbitrations is well recognized.

Global Arbitration Review's The Guide to Construction Arbitration - edited by Stavros Brekoulakis and David Brynmor Thomas - takes the reader through the essential details of preparing, mitigating and managing construction disputes internationally. These include preparing contracts and guarantees, setting up dispute boards, organising proceedings in arbitrations, analysing documents and evidence and navigating within particular industries and regions. With contributions from the world's leading experts, the Guide is organised into 4 sections: I. International Construction Contracts II.

International Arbitration for Construction Disputes III. Select Topics on Construction Arbitration IV. Regional Construction Arbitration.

Arbitration in Context Series Volume 1 There is probably no area of activity more in need of reliable dispute resolution procedures than construction projects, especially if more than one jurisdiction is involved. The third edition of this eminently practical guide greatly facilitates the process for all parties concerned. The text, updated to include the latest edition of arbitral rules and introducing the Prague Rules, considers the full range of available dispute resolution methods, including mediation, conciliation and determination by dispute review boards, before focusing specifically on arbitration. The book then looks in detail at all aspects of arbitration, from commencement of proceedings, selection of the tribunal, through preparation and collection of the evidence necessary in complex construction cases, to common procedural issues, the conduct of the hearing, the effect of the award, challenges to it and its enforcement. The third edition addresses fresh thinking on MedArb, guidance on preparation for and conduct of virtual hearings in the wake of COVID-19, technological advances to assist collection and presentation of evidence, litigation funding and includes a new chapter on the role of arbitration in tender disputes. Specific valuable features include the following: guidance on the drafting of dispute resolution provisions designed to minimise disputes and facilitate their swift resolution; flowcharts to illustrate the stages in dispute procedures and arbitration; a comparison between common law and civil law approaches to key concepts; details of the key features of a construction contract, common standard forms and procurement structures; expert guidance on effective contract administration; step-by-step advice on the conduct of a construction arbitration to maximise efficiency; and coverage of particular issues thrown up by complex construction disputes which differentiate them from other commercial disputes, with guidelines on how to approach such issues in the presentation before a tribunal. As an easy-to-use resource for both general counsel and the lawyers in private practice, this book has no peers. It has proved to be of particular value to commercial contract negotiators and corporate counsel who may have many years of experience but have not had to live through a construction dispute or manage a construction contract during the life of a project. Lawyers in private practice embarking on a construction dispute for the first time will also find this book of value, as will students of dispute resolution.

Assembled from Dispute Resolution Journal - the flagship publication of the American Arbitration Association - the chapters in the Handbook have all, where necessary, been revised and updated prior to publication. The book is succinct, comprehensive and a practical introduction to the use of arbitration and ADR, written by leading practitioners and scholars. The Handbook begins with chapters on specific strategies and tools to help manage risks and avoid disputes in the construction field. It discusses ADR as it relates to subcontracting and labor disputes, the use of a neutral architect, the importance of site visits, and the significance of understanding ADR procedures before agreeing to them. The option of using mediation to resolve disputes is explored, including guidelines and tools for successful mediation, the expert's role in construction mediation, and what works and what doesn't work in construction disputes. The use of arbitration is also looked at in depth and guidance is provided for both the arbitrator and for the advocate. There is an entire section devoted to partnering (the creation of a working relationship between a building owner and a contractor which further involves subcontractors, design professionals, and other agencies), discussing its benefits and providing useful tips. Lastly, advice is provided for both small and complex construction claims, and the use of Dispute Review Boards (comprising panels of three technically qualified neutral individuals). The chapters were selected from an extensive body of writings and, in the main, represent world-class assessments of arbitration and ADR practice. All the major facets of the field are addressed and provide the reader with comprehensive and accurate information, lucid evaluations, and an indication of future developments. They not only acquaint, but also ground the reader in the field.

Construction Arbitration in Central and Eastern Europe Contemporary Issues Edited by: Crina Baltag & Cosmin Vasile The successful execution of a construction project is inextricably linked to the management of risks and the expeditious settlement of any disputes that may arise. In this regard, the wealth of experience gained by Central and Eastern European practitioners in dealing with complex issues arising in construction projects in the region is highly relevant to international arbitration. Thus, this timely book provides a combination of local expertise and cross-jurisdictional perspectives on topics that most often emerge in construction disputes and which resonate far beyond the specific region covered. The authors, all practitioners with significant expertise in international and domestic construction disputes in Central and Eastern European countries, focus on the following topics: the peculiarities of evidence in construction disputes; the probative value of dispute boards, as well as their enforceability; multi-party issues triggered by the participation of various stakeholders besides employer, contractor and subcontractors; provisional measures; arbitrability of contracts with public authorities; issues of liquidated damages; changes of legislation and costs over passage of time; time bar issues; and resolution of disputes related to construction projects as protected investments. Given the increasing number of disputes and the scarce resources available, this essential guide to contemporary topics in construction disputes, with its cross-border perspective, will prove invaluable to practitioners and to academics in the field of construction law and dispute resolution.

Multi-Party and Multi-Contract Arbitration in the Construction Industry provides the first detailed review of multi-party arbitration in the international construction sector. Highly practical in approach, the detailed interpretation and assessment of the arbitration of multi-party disputes will facilitate understanding and decision making by arbitrators, clients and construction contractors.

The updated second edition of the practical guide to international construction contract law The revised second edition of International Construction Contract Law is a comprehensive book that offers an understanding of the legal and managerial aspects of large international construction projects. This practical resource presents an introduction to the global construction industry, reviews the basics of construction projects and examines the common risks inherent in construction projects. The author is an expert in international construction contracts and puts the focus on FIDIC standard forms and describes their use within various legal systems. This important text contains also a comparison of other common standard forms such as NEC, AIA and VOB, and explains how they are used in a global context. The revised edition of International Construction Contract Law offers additional vignettes on current subjects written by international panel of numerous contributors. Designed to be an accessible resource, the book includes a basic dictionary of construction contract terminology, many sample letters for Claim Management and a wealth of examples and case studies that offer helpful aids for construction practitioners. The second edition of the text includes: Updated material in terms of new FIDIC and NEC Forms published in 2017 Many additional vignettes that clearly exemplify the concepts presented within the text Information that is appropriate for a global market, rather than oriented to any particular legal system The essential tools that were highlighted the first edition such as sample letters, dictionary and more A practical approach to the principles of International Construction Contract Law and construction contract management. Does not get bogged down with detailed legal jargon Written for consulting engineers, lawyers, clients, developers, contractors and construction managers worldwide, the second edition of International Construction Contract Law offers an essential guide to the legal and managerial aspects of large international construction projects.

Previous edition, 1st, published in 2003.
