In addition, a Muslim physician derives his/her conclusion from rules of Islamic laws (Shari'ah) and Islamic medical ethics. The first main principle of Islamic Medicine is the emphasis on the sanctity of human life which derives from the Qur'an: "If anyone saved a life, it would be as if he saved the life of all mankind" 13. The verse says: The person who helps to preserve the life of even one person is the protector of the whole of humanity, for he possesses a quality which is ...

In this pioneering work, Abdulaziz Sachedina - a scholar with life-long academic training in Islamic law - relates classic Muslim religious values to the new ethical challenges that arise from medical research and practice.

Islamic Perspectives on the Principles of Biomedical Ethics presents results from a pioneering seminar in 2013 between Muslim religious scholars, biomedical scientists, and Western bioethicists at the research Center for Islamic Legislation & Ethics, Qatar Faculty of Islamic Studies. By examining principle-based bioethics, the contributors to this volume addressed a number of key issues related to the future of the field. Discussion is based around the role of religion in bioethical reasoning, specifically from an Islamic perspective. Also considered is a presentation of the concept of universal principles for bioethics, with a response looking at the possibility (or not) of involving religion. Finally, there is in-depth analysis of how far specific disciplines within the Islamic tradition – such as the higher objectives of Sharia (maqāṣid al-Sharī'ah) and legal maxims (qawā'id fiqhīyah) – can enrich principle-based bioethics.

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-ʿaql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

Muslim Medical Ethics draws on the work of historians, health-care professionals, theologians, and social scientists to produce an interdisciplinary view of medical ethics in Muslim societies and of the impact of caring for Muslim patients in non-Muslim societies. Edited by Jonathan E. Brockopp and

Thomas Eich, the volume challenges traditional presumptions of theory and practice to demonstrate the ways in which Muslims balance respect for their heritage with the health issues of a modern world. Like members of many other faiths, Muslims are deeply engaged by the technological challenges posed by modern biomedicine, and they respond to those challenges with enormous creativity—whether as patients, doctors, or religious scholars. *Muslim Medical Ethics* demonstrates that religiously based cultural norms often inform medical practice, and vice versa, in an ongoing discourse. The contributors map the breadth and boundaries of this discourse through discussions of contested issues on the cutting edge of ethical debates, from fertilized embryos in Saudi Arabia to patient autonomy in Toronto, from organ trafficking in Egypt to sterilization in Tanzania. As the authors illustrate, the effects of Muslim medical ethics have ramifications beyond the Muslim world. With growing populations of Muslims in North America and Europe, Western physicians and health-care workers should be educated on the special needs of this category of patients. In every essay the richness of the Islamic tradition is visible. In the premodern period Muslim physicians were considered among the best in the world, building and improving on Greek and Indian traditions. Muslim physicians today continue that tradition while incorporating scientific advances. Scholars of Islamic law work closely with physicians to develop ethical guidelines for national and international bodies, and individual Muslims take full advantage of advances in medicine and religious law, combining them with the wisdom of Sufism and traditions of family and community. This exploration of Muslim medical ethics is therefore a foray into the richness and sophistication of the Islamic tradition itself. Designed as an engaging point of entrance for students in religious studies, anthropology, ethics, and medical humanities, this pathbreaking volume also has utility for health-care professionals and policy makers.

Islamic Bioethics presents a wide variety of perspectives and debates on how Islamic societies deal with the ethical dilemmas raised by biomedicine and new technologies. The book is a "constructive dialogue" between contributors selected from a multidisciplinary group of Muslim and non-Muslim scholars from different Islamic countries. The 11 chapters illuminate the diversity and complexity of the issues discussed in Islamic bioethics and pave the way to a better understanding of Islamic bioethics and dialogue in the global bioethics community. The chapters take both theoretical and practical approaches to the topic, and each covers an emerging issue in Islamic bioethics. This book will be useful for academics and professional institutions in both Islamic and non-Islamic countries, and will be instrumental in providing researchers, scholars, students, policymakers and medical professionals with access to the latest issues and debates related to Islamic bioethics. Contributors include: Tariq Ramadan, Abdallah Daar, Ali Albar, Mohsin Ebrahim, Baharouddin Azizan Alastair Campbel, Bagher Larijani, Carol Taylor, Gamal Serour, James Rusthoven, Ilhan Ilkilic, Ingrid Mattson, Hassan Chamsi-Pasha, Jonathan Crane, Hakan Ertin, Mehunisha Suleman. with and how decisions are made in Islamic bioethics from a multidisciplinary group of scholars. Bioethical topics presented in this volume are the most critical issues in Islamic bioethics as well as global bioethics. Each chapter presents an update of a bioethical topic and/or challenges in Islamic bioethics from an authoritative bioethics/religious scholar. In an innovative approach this volume presents a constructive dialogue between prominent Muslim and Non-Muslim scholars on Islamic bioethics.

Medicine and health care generate many bioethical problems and dilemmas that are of great academic, professional and public interest. This comprehensive resource is designed as a succinct yet authoritative text and reference for clinicians, bioethicists, and advanced students seeking a better understanding of ethics problems in the clinical setting. Each chapter illustrates an ethical problem that might be encountered in everyday practice; defines the concepts at issue; examines their implications from the perspectives of ethics, law and policy; and then provides a practical resolution. There are 10 key sections presenting the most vital topics and clinically relevant areas of modern bioethics. International, interdisciplinary authorship and cross-cultural orientation ensure suitability for a worldwide audience. This book will assist all clinicians in making well-reasoned and defensible decisions by developing their awareness of ethical considerations and teaching the analytical skills to deal with them effectively.

This book presents a critical analysis of the debate in Muslim countries at the religious, legal and political level, sparked by the introduction of new biomedical technologies such as cloning, genetics, organ transplants and in vitro fertilisation. The book draws on law, sociology, anthropology, politics and the history of science. For this reason it will be of interest to scholars and operators in a wide variety of disciplines and fields.

Edited by four leading members of the new generation of medical and healthcare ethicists working in the UK, respected worldwide for their work in medical ethics, *Principles of Health Care Ethics, Second Edition* is a standard resource for students, professionals, and academics wishing to understand current and future issues in healthcare ethics. With a distinguished international panel of contributors working at the leading edge of academia, this volume presents a comprehensive guide to the field, with state of the art introductions to the wide range of topics in modern healthcare ethics, from consent to human rights, from utilitarianism to feminism, from the doctor-patient relationship to xenotransplantation. This volume is the Second Edition of the highly successful work edited by Professor Raanan Gillon, Emeritus Professor of Medical Ethics at Imperial College London and former editor of the *Journal of Medical Ethics*, the leading journal in this field. Developments from the First Edition include: The focus on "Four Principles Method" is relaxed to cover more different methods in health care ethics. More material on new medical technologies is included, the coverage of issues on the doctor/patient relationship is expanded, and material on ethics and public health is brought together into a new section.
