Carl Jung (1875-1961) was a Swiss psychiatrist who is today most noted for founding the school of analytical psychology and for his work on archetypes, introversion and extroversion, and the collective unconscious. Jung spent his childhood wandering Switzerland's rural streams and fields, and his adulthood residing at a Swiss lakefront.

**Weaknesses of Carl Jung's Theory | Synonym**

Following up on Jung's theory of psychological types, where the contrasting attitudes of extraversion and introversion colored the judging (rational) functions of thinking and feeling, and the perceiving (irrational) functions of intuition and sensation, he developed an archetypal model of a dialogical self wherein conscious functions contend with more unconscious complexes in the shadow.
