Male Infertility: What to Know and How to Cope - The New ...

Infertility is a widespread problem. For about one in five infertile couples the problem lies solely in the male partner. It is estimated that one in 20 men has some kind of fertility problem with low numbers of sperm in his ejaculate. However, only about one in every 100 men has no sperm in his ejaculate.

Fact Sheet Male Infertility - Healthy Male

Definition ' Infertility is the inability of a sexually active, non-contracept- ing couple to achieve spontaneous pregnancy in one year. ' (WHO, 1995). About 15% of couples do not achieve pregnancy within 1 year and seek medical treatment for infertility. Eventually, less than 5% remain unwillingly childless.

GUIDELINES FOR THE INVESTIGATION AND TREATMENT OF MALE ...

The presence of disorders in both the man and the woman has been reported in about 40% of infertile couples. Risk factors for infertility include smoking, obesity, occupational risks, excessive alcohol consumption, and drug use. Female fertility declines with age; the effect of age on male fertility is less clear.

Infertility | Topics A to Z | CKS | NICE

Infertility (often called subfertility) is a disease of the reproductive system defined by the failure to achieve a pregnancy after 12 months or more of regular unprotected sex (without contraception) between a man and a woman. Around 9 to 15% of couples will have fertility problems. Infertility can affect men and women.

What is infertility? » British Fertility Society

Infertility is when a couple cannot get pregnant (conceive) despite having regular unprotected sex. Around 1 in 7 couples may have difficulty conceiving. About 84% of couples will conceive naturally within a year if they have regular unprotected sex (every 2 or 3 days). For couples who have been trying to conceive for more than 3 years without success, the likelihood of getting pregnant naturally within the next year is 1 in 4, or less.
