The first manned expedition to Mars starts out as a routine study of the barren planet's deserts, and at first the team finds no trace of organic life. But their discovery of majestic pyramids, looming skyscrapers and mysterious energy sources opens the way to more excitement than anybody could possibly have anticipated. Inevitably, their experiences in this alien environment affects the explorers, both in mind and in body. After the Red Planet has yielded up its secrets life on Earth may never be the same...

One of Italy's leading men of letters, a chemist by profession, writes about incidents in his life in which one or another of the elements figured in such a way as to become a personal preoccupation

Public administration as a field of study finds itself in the middle of a fluid environment. The very reach and complexity of public administration has been easy to take for granted, easy to attack, and difficult to explain, particularly in the soundbite and Twitter-snipe media environment. Not only has the context for the discipline changed, but the institutions of public administration have adapted and innovated to deliver services to the public and serve those in power while becoming increasingly complex themselves. Has public administration evolved? And what new lines of research are critical for effective policy and delivery of programs and public services while preserving foundational principles such as the rule of law and expert institutions? This Handbook of Public Administration sheds light for new researchers, doctoral students, scholars, and practitioners interested in probing modern public administration 's role in solving major challenges facing nations and the world. This fourth edition recognizes that the scholarship of public administration must reflect the diverse influence of an international orientation, embracing public administration issues and practices in governance systems around the world, and illustrating just how practice can vary across jurisdictions. Every section identifies foundational principles and issues, shows variation in practice across selected jurisdictions, and identifies promising avenues for research. Each chapter revisits enduring themes and tensions, showing how they persist, along with new challenges and opportunities presented by digital technology and contemporary political realities. The Handbook of Public Administration, Fourth Edition provides a compelling introduction to and depiction of the contemporary realities of public administration, and it will inspire new avenues of inquiry for the next generation of public administration researchers.

What makes a metal precious? It's rare, and it's useful. When a metal is both these things, like gold, it's very precious and expensive. This book takes readers underground where they'll discover the processes and elements that shape precious metals. They'll learn about the features of metals that make them desirable, such as luster, ductility, and reactivity, and how certain metals are utilized. While readers may know something about gold and silver, they'll become acquainted with other important precious metals such as rhodium and palladium. Vivid photographs, helpful graphic organizers, and interesting sidebars make this crucial science topic engaging and accessible.

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters?* The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. **THE DISAPPEARING SPOON** masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. *Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

Who is Andrew Elric, and what's he doing here? Says he's here with answers. As Andrew would explain it, "We live our lives shrouded with mysteries. We're compelled to show faith in explanations that we really don't believe in—the origins of our being, the nature and existence of God, are we alone in the universe? Less weighty issues as well as stuff we'd just like to know—who really shot Kennedy? What happened to Jimmy Hoffa? You think about it and know there really are answers to all of it, but you don't have access to them. I've got those answers and, more importantly, proof for all of it. Some of it you can hold in your hand. You follow the news, you know this place is going to blow. I'm here to try and stop it. Religion, race, nationalism . . . We all come from the same place. But the world has suffered through too many charlatans and false prophets. I'm going to use these proofs to get you savages to settle down." Andrew has recruited renowned attorney, author, and sports agent Aron Samuelson to help him get the word out. Aron, in the throes of a midlife crisis, is looking for the next "big thing" in his life. As they say, be careful what you wish for.

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

The world's leading textbook on astrobiology—ideal for an introductory one-semester course and now fully revised and updated Are we alone in the cosmos? How are scientists seeking signs of life beyond our home planet? Could we colonize other planets, moons, or even other star systems? This introductory textbook, written by a

team of four renowned science communicators, educators, and researchers, tells the amazing story of how modern science is seeking the answers to these and other fascinating questions. They are the questions that are at the heart of the highly interdisciplinary field of astrobiology, the study of life in the universe. Written in an accessible, conversational style for anyone intrigued by the possibilities of life in the solar system and beyond, *Life in the Universe* is an ideal place to start learning about the latest discoveries and unsolved mysteries in the field. From the most recent missions to Saturn ' s moons and our neighboring planet Mars to revolutionary discoveries of thousands of exoplanets, from the puzzle of life ' s beginning on Earth to the latest efforts in the search for intelligent life elsewhere, this book captures the imagination and enriches the reader ' s understanding of how astronomers, planetary scientists, biologists, and other scientists make progress at the cutting edge of this dynamic field. Enriched with a wealth of engaging features, this textbook brings any citizen of the cosmos up to speed with the scientific quest to discover whether we are alone or part of a universe full of life. An acclaimed text designed to inspire students of all backgrounds to explore foundational questions about life in the cosmos. Completely revised and updated to include the latest developments in the field, including recent exploratory space missions to Mars, frontier exoplanet science, research on the origin of life on Earth, and more. Enriched with helpful learning aids, including in-chapter Think about It questions, optional Do the Math and Special Topic boxes, Movie Madness boxes, end-of-chapter exercises and problems, quick quizzes, and much more. Supported by instructor ' s resources, including an illustration package and test bank, available upon request.

Introduction to Chemistry is a 26-chapter introductory textbook in general chemistry. This book deals first with the atoms and the arithmetic and energetics of their combination into molecules. The subsequent chapters consider the nature of the interactions among atoms or the so-called chemical bonding. This topic is followed by discussions on the nature of intermolecular forces and the states of matter. This text further explores the statistics and dynamics of chemistry, including the study of equilibrium and kinetics. Other chapters cover the aspects of ionic equilibrium, acids and bases, and galvanic cells. The concluding chapters focus on a descriptive study of chemistry, such as the representative and transition elements, organic and nuclear chemistry, metals, polymers, and biochemistry. Teachers and undergraduate chemistry students will find this book of great value.

The *Bulletin of the Atomic Scientists* is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.
