Launched in 1958, as the successor to the ubiquitous Ferguson TE20, the Masey-Ferguson 35 was a product of the merger of Massey-Harris and Ferguson. It incorporated numerous improvements and new features and became massively popular worldwide. Its companion, the 65 model, was introduced shortly afterwards and was a larger tractor, offered with the revolutionary Multi Power system that gave 12 forward and four reverse gears. Durable and versatile, these tractors are still a practical proposition today, and even unrestored examples command high prices. Michael Thorne, author of Ferguson TE20 in Detail, continues the story as he describes the development of these models, the production versions and their capabilities, options and extras, conversions, implements and their use today. Outstanding surviving examples are featured in some 80 photographs specially taken for this book, and there are approximately 120 accompanying archive illustrations.

The Ferguson TE-20 is the most iconic of all tractors - the small, unobtrusive grey tractor which many people will recognize. The TE-20 replaced the horse on many farms after WWII, and paved the way for the mechanization of farming. Over 500,000 examples were built and sold all over the world, with US- and French-built models manufactured under license.

The little grey Fergie is Britain's best-loved tractor, the light user-friendly machine that finally replaced the horse on farms. This highly illustrated account covers the full history of Harry Ferguson's tractor products from his pioneering work before the 1930s to the merger with Massey in 1957.

The author has had access to fresh archive material and has interviewed many of the surviving men who were associated with Ferguson. The appeal of the Fergie lay in its lightness and utility, and also in the system of mechanized farming of which it was a part. Throughout the book, reference is made to the implements which lay at the heart of the system. Stuart Gibbard has won "Tractor and Machinery" magazine's award for the best British tractor book five years running.

The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus immediately qualify for benefits. In this report, the IOM makes several recommendations for improving SSA's capacity to determine disability benefits more quickly and efficiently using the Listings.

David Crystal's classic *English as a Global Language* considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However, Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language.

It has, improbably, been called uncommonly lucid, even riveting by *The New York Times*, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description

of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States—which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean—it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts—it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7—it is nevertheless an essential record of one of the most transformational events of modern times.

The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.
