A full electric charge will cost you less than £1.00 and it will take you 28 miles. To put that into context, the average commute is around 5 miles. The Outlander PHEV will cost you around 15p a day in daily running costs, and you might find yourself hardly having to use the petrol engine at all.

Mitsubishi Outlander PHEV MPG | Commute For Pennies A Day

The Mitsubishi Outlander can be incredibly cheap to run if you pick the hybrid version, but that relies heavily on how you use the car. You'll ideally have access to a fast-charging wallbox at home and/or at work to top up the batteries regularly, and if that's the case and you don't do many miles per day then you could in theory use very little fuel at all.

Do you want to know how a quintessentially British brand expands into the Chinese market, how organizations incorporate social media into their communication campaigns, or how a department store can channel its business online? What can you learn from these practices and how could it influence your career, whether in marketing or not? Marketing, 4th edition, will provide the skills vital to successfully engaging with marketing across all areas of society, from dealing with skeptical consumers, moving a business online, and deciding which pricing strategy to adopt, through to the ethical implications of marketing to children, and being aware of how to use social networking sites to a business advantage. In this edition, a broader range of integrated examples and market insights within each chapter demonstrate the relevance of theory to the practice, featuring companies such as Porsche, Facebook, and L'Oreal. The diversity of marketing on a global scale is showcased by examples that include advertising in the Middle East, Soberana marketing in Panama, and LEGO's expansion into emerging markets. Theory into practice boxes relate these examples back to the theoretical frameworks, models, and concepts outlined in the chapter, giving a fully integrated overview of not just what marketing theory looks like in practice, but how it can be used to promote a company's success. Video interviews with those in the industry offer a truly unique insight into the fascinating world of a marketing practitioner. For the fourth edition, the authors speak to a range of companies, from Withers Worldwide to Aston Martin, the City of London Police to Spotify, asking marketing professionals to talk you through how they dealt with a marketing problem facing their company. Review and discussion questions conclude each chapter, prompting readers to examine the themes discussed in more detail and encouraging them to engage critically with the theory. Links to seminal papers throughout each chapter also present the opportunity to take learning further. Employing their widely-praised writing style, the authors continue to encourage you to look beyond the classical marketing perspectives by contrasting these with the more modern services and societal schools of thought, while new author, Sara Rosengren, provides a fresh European perspective to the subject. The fourth edition of the best-selling Marketing, will pique your curiosity with a fascinating, contemporary, and motivational insight into this dynamic subject. The book is accompanied by an Online Resource Centre that features: For everyone: Practitioner Insight videos Library of video links Worksheets For students: Author Audio Podcasts Multiple choice questions Flashcard glossaries Employability guidance and marketing careers insights Internet activities Research insights Web links For lecturers: VLE content PowerPoint Slides Test bank Essay Questions Tutorial Activities Marketing Resource Bank Pointers on Answering Discussion questions Figures and Tables from the book Transcripts to accompany the practitioner insight videos.

Lex Fullarton takes a closer look at the three pillars of the sustainable development framework known as the Triple Bottom Line (TBL). The concept of the TBL is that for a project to be sustainable it must not simply be profitable in economic terms, but it must also benefit society and enhance the natural environment. In the 21st century, the greatest threat to Earth's natural environment and the population of the planet is the rise of greenhouse gas emissions caused from burning fossil fuel as an energy source. The rise of GHG emissions has resulted in a rise in the ambient air temperature of the Earth's atmosphere and is resulting in a significant change in climatic conditions on Earth. Fullarton scrutinizes the problem of getting industry and governments to understand the significance of creating harmony within the TBL. One of the main problems is that partisan politics tends to fragment the factors of the TBL

rather than bring them together. Fullarton takes a strong stand in suggesting that taxation systems, which have traditionally been viewed primarily as a means of raising government finance, can be effectively applied to influence industrial and consumer attitudes towards transiting away from polluting fossil-fuel energy sources towards non-polluting renewable energy use.

This book focuses on the latest emerging technologies in electric vehicles (EV), and their economic and environmental impact. The topics covered include different types of EV such as hybrid electrical vehicle (HEV), battery electrical vehicle (BEV), fuel cell electrical vehicle (FCEV), plug-in hybrid electrical vehicle (PHEV). Theoretical background and practical examples of conventional electrical machines, advanced electrical machines, battery energy sources, on-board charging and off-board charging techniques, and optimization methods are presented here. This book can be useful for students, researchers and practitioners interested in different problems and challenges associated with electric vehicles.

This project explores the energy systems and their development towards 2035 in the West Nordic areas and the Arctic. The objective of the project was to contribute to a knowledge base that can be shared and used in developing a sustainable and competitive energy systems that fulfil the goals and obligations for 2035 on climate, emissions and renewable shares. "Energy systems" in this case covers the potential for different renewable energy resources, infrastructure, the demand for energy in different sectors, and relevant policies. Along with the scenario analysis, five case studies have been developed: land transport; a small hybrid energy system in Igaliku, Greenland; electrification of fishing vessels; tourism; and the future energy system in Svalbard.

The job interview is probably the most important step you will take in your job search journey. Because it's always important to be prepared to respond effectively to the questions that employers typically ask at a job interview Petrogav International has prepared this eBooks that will help you to get a job in oil and gas industry. Since these questions are so common, hiring managers will expect you to be able to answer them smoothly and without hesitation. This eBook contains 291 questions and answers for job interview and as a BONUS web addresses to 288 video movies for a better understanding of the technological process. This course covers aspects like HSE, Process, Mechanical, Electrical and Instrumentation & Control that will enable you to apply for any position in the Oil and Gas Industry.

This book offers you a brief, but very involved look into the operations in the drilling of an oil & gas wells that will help you to be prepared for job interview at oil & gas companies. From start to finish, you'll see a general prognosis of the drilling process. If you are new to the oil & gas industry, you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil & gas person, you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations and terminology used on offshore drilling platforms. It is intended also for non-drilling personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore

operations.
