Psychology incorporates discussions that reflect the diversity within the discipline, as well as the diversity of cultures and communities across the globe.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations

observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Oncofertility has emerged as a way to address potential lost or impaired fertility in cancer patients and survivors, with active biomedical research that is developing new ways to help these individuals preserve their ability to have biological children. In order to move beyond oncofertility as a science and medical technology and begin to address the ethical, legal, and social ramifications of this emerging field, we must give voice to scholars from the humanities and social sciences to engage in a multidisciplinary discussion. This book brings together a pool of experts from a variety of fields, including communication, economics, ethics, history, law, religion, and sociology, to examine the complex

issues raised by recent developments in oncofertility and to offer advice from national and international perspectives as we create new technology. Given the inherent interdisciplinary nature of oncofertility, this book is not only valuable, but also necessary to cultivate a deep understanding of new issues with the eventual aim of offering proposals for addressing them. Indeed, this book will be useful for people not only within the humanities and social sciences disciplines but also for those who are confronted with cancer and the possibility of impaired fertility and the medical practitioners within oncology and reproductive medicine who are at the front lines of this emerging field.
