Mars: Prospective Energy and Material Resources - Google Books

The Moon bears substantial natural resources which could be exploited in the future. Potential lunar resources may encompass processable materials such as volatiles and minerals, along with geologic structures such as lava tubes that together, might enable lunar habitation. The use of resources on the Moon may provide a means of reducing the cost and risk of lunar exploration and beyond. Insights about lunar

Lunar resources - Wikipedia

The moon undoubtedly has a powerful energy; it is one that not only attracts our attention, but is also the most important planet in our solar system, since it gives the Earth life. It creates our currents and maintains the oceans' tides - the Earth would probably not be able to sustain life without it.
