responses in 60 countries - in Nielsen's 2015 Global Health & Wellness Survey consider themselves overweight, and a similar percentage (50 percent) is actively trying to lose weight. And they're doing so by making more healthy food choices. Between 2011 and 2014, the number of North American respondents following a low-carb, high-fat diet (23 percent) increased 10 percentage points. While the low-carb movement appears to be gaining momentum in North America, we still trail Asia-Pacific, where 34 percent of respondents - the highest of any region - say they follow a low-carb, high-fat diet to lose weight. Eating smaller portions to lose weight is most popular in North America (49 percent). The percentage of

respondents who are eating fewer processed foods also is highest in North America (46 percent). A plant-based diet is rooted in food quality, promoting locally sourced, organic food whenever possible.

The Obesity Code by Jason Fung | Summary & Analysis Preview: The Obesity Code addresses the history, causes, and treatments of obesity and today's rising obesity rates. By understanding it through scientific and social study, obesity becomes less of a blanket term for metabolic complications and a more tangible problem with real, though not widely practiced, solutions. The main problem with treating obesity is that many doctors and their obese patients

Read Online Nielsen Global Health And Wellness Report Worldwide

don't know what actually causes obesity. Often, health experts believe that weight gain results from consuming too many calories while not expending enough calories, a theory known as "calories in, calories out." However, decades of research has proven that this obesity model is problematic and oversimplified. Calorie consumption and expenditure are not independent of each other. If people decrease calorie consumption in an effort to lose weight, their body compensates by slowing down processes such as metabolism to expend fewer calories. Also, exercise is not nearly as instrumental in weight loss as was once thought... PLEASE NOTE: This is key takeaways and analysis of the book and NOT the

Developing Food Products for Customers with Specific Dietary Needs explains the process for developing foods for customers who have specific dietary needs, further shining a light on the number of increasing medical conditions related to food intake that have emerged in the past few decades. From increased fat and sugar intake leading to higher levels of obesity, to greater levels of coeliac disease, the ingredients and nutritional content of food is becoming more and more important. Additionally, consumers are following particular diets for many different reasons, be it health related, or for religious or moral reasons. The first part of the book looks, in detail, at the

organizational structure required within a company to allow for the development of food products which meet the needs of these customers, while the second part presents a number of case studies highlighting the development of food products for various dietary requirements. Precise coverage includes section on the development of low-sodium, low-sugar, low-fat, and low-carbohydrate products with the aim of producing healthier foods, as well as the development of organic and vegetarian products for consumers who are following diets for personal reasons. The potential solutions for developing foods for customers who have specific dietary needs are likely to include both ingredients and technology developments. The

The sensory properties of foods are the most important reason people eat the foods they eat. What those properties are and how we best measure those properties are critical to understanding food and eating behavior. Appearance, flavor, texture, and even the sounds of food can impart a desire to eat or cause us to dismiss the food as unappetizing, stale, or even inappropriate from a cultural standpoint. This Special Issue focuses on how sensory properties are measured, the specific sensory properties of various foods, and consumer behavior related to which properties might be most important in certain situations and how consumers use sensory attributes to make decisions about what they will eat. This
