The Stages of Dementia: How Dementia Progresses

Dementia has a physical, psychological, social, and economic impact, not only on people with dementia, but also on their carers, families and society at large.

Dementia is a syndrome – usually of a chronic or progressive nature – in which there is deterioration in cognitive function (i.e. the ability to process thought) beyond what might be expected from normal ageing.

Dementia - WHO

One in 14 people over the age of 65 have dementia, and the condition affects 1 in 6 people over 80. The number of people with dementia is increasing because people are living longer. It is estimated that by 2025, the number of people with dementia in the UK will be more than 1 million. Further

"PEOPLE WITH DEMENTIA HAVE BEEN THE LAST TO BE CONSIDERED

...
As their condition progresses, people with dementia become more disorientated, forgetful and less able to think things through. For some people this struggle to make sense of the world can cause anxiety. However, there are things that carers and people around them can do to support a person with dementia to feel less anxious as their condition progresses.

Anxiety and dementia | Alzheimer's Society
People with dementia may sometimes behave in ways that are physically or verbally aggressive. This can be very distressing for the person and for those supporting them, including their family and friends. It can also often be a factor in the decision to move the person with dementia into a care home. 4

Aggression and dementia | Alzheimer's Society

Dementia can have a very big effect on the person affected. They may fear their loss of memory and thinking skills, but they also fear the loss of who they are. They may also find they don't understand what's going on or why they feel they're not in control of what's happening around them or to them. All of this can affect their behaviour.

Coping with dementia behaviour changes - NHS

A person with dementia is much more likely to become withdrawn because they feel isolated or bored. Many people with dementia spend much of their time alone or, even if they are with others, there may not be much conversation between them. A person with dementia may find it difficult to initiate a conversation or an activity themselves.
