This highly respected, best-selling text offers students an enjoyable, extraordinarily well-written introduction to the Psychology of Women. Appropriate for students from a wide variety of backgrounds, this comprehensive book captures women's own experiences through direct quotations and an emphasis on empirical research. Known for its balance of scholarship, readability, and inclusion of various kinds of women, Margaret Matlin continues to lead the way for the Psychology of Women course. Meticulously updated to reflect the most current research, PSYCHOLOGY OF WOMEN was written with a genuine interest in and understanding of the students for whom the book is written. Her text includes a chapter on old age as well as discussions of topics such as welfare issues, and pregnancy and women's retirement, which are central in many women's lives, but not consistently covered in other texts.

This text's success has come in large part from its up-to-date coverage of important research and theories and offers the latest and most comprehensive overview of cognition on the market today. Recent developments in perception, imagery, problem solving, and creativity are highlighted along with advances in such areas as memory and language and expanded theoretical approaches.

Cognition provides readers with a clear, balanced, and highly engaging coverage of the field, along with extensive pedagogical support and numerous applications to everyday life. The seventh edition includes a new Individual Difference in Cognition feature that shows the relevance of cognitive psychology in their careers.

Modern psychology has become a broad and fragmented collection of research areas, theoretical orientations, and professional organizations. The author, who believes integration within the discipline is critical, makes the case that its empirical and theoretical aspects can be unified under the umbrella of adaptation. The principles of learning, and the characteristics of memory and language—our adaptation to a challenging environment—are pertinent to all we do, and the sciences of learning and cognition are the subject areas most relevant to these proximate behavior-environment relationships. Because the adaptability of a behavior is often tied to its function, the author's functional perspective serves as a helpful organizational tool for studying the otherwise disparate aspects of learning and cognition—thinking, memory, conceptual behavior, and language. New to this edition is an emphasis on applied behavior analysis, a rapidly growing and credentialled profession. Updated pedagogical features include opening chapter vignettes, interim summaries and review questions, improved graphics, and a full glossary of key terms.

Islamic Psychology or ilm an-nafs (science of the soul) is an important introductory textbook drawing on the latest evidence in the sub-disciplines of psychology to provide a balanced and comprehensive view of human nature, behaviour and experience. Its foundation to develop theories about human nature is based upon the writings of the Qur'an, Sunna, Muslim scholars and contemporary research findings. Synthesising contemporary empirical psychology and Islamic psychology, this book is holistic in both nature and process and includes the physical, psychological, social and spiritual dimensions of human behaviour and experience. Through a broad and comprehensive scope, the book addresses three main areas: Context, perspectives and the clinical applications of applied psychology from an Islamic approach. This book is a core text on Islamic psychology for undergraduate and postgraduate students and those undertaking continuing professional development in Islamic psychology, psychotherapy and counselling. Beyond this, it is also a good supporting resource for teachers and lecturers in this field.

In this book, Sheila Greene presents a challenging new perspective on the psychological development of girls and women which emphasises the central role of time in human development. She critically reviews traditional and contemporary theoretical approaches - ranging from orthodox psychoanalysis to relational and post-modern theories - and argues that even those claiming to be focused on development have presented a view of women's lives as fixed and determined by their nature or their past. These theories, she believes, should be rejected because of their inherent lack of validity and their frequently oppressive implications for women. Greene's approach places primary importance on temporality itself and on the competing discourses on time, age and development which play an active role in the construction of the lives of girls and women. Essential but often neglected insights from the more compelling developmental and feminist theories are woven together within a theoretical framework that emphasises temporality, emergence and human agency. The result is a liberating theory of women's psychological development as constantly emerging and changing in time rather than as static and fixed by their nature, socio-cultural context and personal history. The Psychological Development of Girls and Women will be essential reading for students and researchers in the psychology of women, developmental psychology and women's studies.
