Light Blue  
Ribbon Book

Red, green and blue in different combinations can create all the colors in the rainbow! So, for example, to set the LED to red, the tuple would be  $(255, 0, 0)$ , which has the maximum level of red, and no green or blue. Green would be  $(0, 255, 0)$ , etc.

The production of  
various colors of light by

# Download Ebook Red

the mixing of the three primary colors of light is known as color addition. Color addition

principles can be used to make predictions of the colors that would result when different colored lights are mixed. For instance, red light and blue light add together to produce magenta light. Green light and red light add together to

# Download Ebook Red

produce yellow light.

## Physics Tutorial: Color Addition

The red, green and blue use 8 bits each, which have integer values from 0 to 255. This makes  $256 * 256 * 256 = 16777216$  possible colors. RGB

Red, Green, Blue.

Each pixel in the LED monitor displays colors this way, by

In the additive color  
system, or RGB color  
model, used to create all  
the colors on a  
computer or television  
display, cyan is made by  
mixing equal amounts  
of green and blue light.

# Download Ebook Red

Cyan is the complement of red; it can be made by the removal of red from white light. Mixing red light and cyan light at the right intensity will make white light.
