The Electra-X with its 'lean burn' motor replaced the older 500 ES engine that was used from 2001 - 2008 on the Bullet models, so there was some overlap. The 'lean burn' motor is essentially a Sixty-5 engine, which was an ES that came with a left-hand gear change and five-speed gearbox, but with a modified alloy barrel to help it pass emissions laws and an electric start as standard ...

from working on their bike's electrical system, believing they have neither the skill nor the knowledge for such work. Dr James Smith explains in Classic Motorcycle Electrics Manual that this need not be the case. Starting with basic electrical theory, the book demonstrates a wealth of electrical tips and techniques, providing a progressive and detailed guide to tasks ranging from simple repairs and upgrades, through to completely rewiring a classic motorcycle. Illustrated profusely with full-colour photographs and easy-to-follow wiring diagrams, this book will be an invaluable resource for all classic bike owners and restorers. The book covers: basic electrical theory; correct usage of a multimeter; comprehensive fault-finding techniques; making good electrical connections; fuses and circuit protection; dynamo and alternator charging systems; correct battery selection and maintenance; improving lighting and installing LEDs; selecting the right spark plug, and much more. Fully illustrated with 420 colour photographs and 167 CAD easy-to-follow wiring diagrams, this is an essential reference work for all classic bike owners.

164 pages, 92 black & white illustrations, size 5.5 x 8.5 inches. Originally published under the title The Book of the Royal Enfield by W.C. Haycraft, this book is one of The Motorcyclist's Library series published in the USA by Floyd Clymer by arrangement with the original publishers Pitman Ltd. of London, England. It includes complete technical data, service and maintenance information and detailed instructions for the repair and overhaul of the major mechanical and electrical components for all Royal Enfield 250cc, 350cc and 500cc single cylinder G, J, J2, Bullet and Clipper models manufactured from 1946 through 1962. There is adequate detailed text and diagrams to assist in major refurbishing such as an engine rebuild or even a complete renovation. Please note that the 1957-1962 unit-construction "Crusader" type models are not covered in this publication. Information for that series of motorcycles is included in the "Second Book of the Royal Enfield" also available from [www.VelocePress.com](http://www.VelocePress.com). This publication has been Out-of-print and unavailable for many years and is becoming increasingly more difficult to find on the secondary market and we are pleased to be able to offer this reproduction as a service to all Royal Enfield motorcycle enthusiasts worldwide.

294 pages, 130 black & white illustrations, size 5.5 x 8.5 inches. In 1963, Temple Press UK published a revised and expanded 4th UK edition of 'Tuning for Speed' and, in 1965, they published a reprint of that 1963 edition. Both the 1963 and the 1965 publications are identical in content and contain 294 pages, a significant increase from the previous 208 page 1960 printing. With a total of 294 pages, the revised and expanded 4th UK edition is the most comprehensive of all of the 'Tuning for Speed' editions ever published. Earlier editions only stretched to 208 pages and later editions shrunk to 260 pages (or less) as what was thought to be 'dated information' was deleted from the contents. This 'dated information' is considered valuable today by those enthusiasts interested in vintage motorcycle tuning and modification. Consequently, this makes the revised 4th UK publication the most complete and desirable edition. Therefore, it is our pleasure to offer this reprint of the Floyd Clymer 'Revised 4th UK Edition or Second American Edition of 'Tuning for Speed' to motorcycle enthusiasts worldwide. 'Tuning for Speed' was originally published in 1948 and continuously reprinted and updated in order to keep pace with the constantly evolving range of British motorcycles and engines. While the primary focus of this publication is on 1965 and prior British motorcycles, the theory and engineering it contains is still applicable to the current crop of high revving imports. 'Tuning for

'Speed' is considered by many knowledgeable motorcycle enthusiasts to be one of the best books ever written on how to improve, modify and fine tune a motorcycle engine and it is often referred to as one of the 'top 10' classic motorcycle books. The Floyd Clymer association with this publication dates back to the early 1960's when he purchased the United States Publishing rights for 'Tuning for Speed' from Temple Press in the UK and, in 1967, Clymer published the 1st American edition of that title. However, by 1967, the Clymer publication had been preceded by 8 printings of the UK edition and was incorrectly identified by Clymer as a 9th edition. In fact, the 1967 Clymer publication is actually a reprint of the less desirable 208 page 1960 UK edition. However, in 1963, the 4th UK edition was revised and expanded to 294 pages (with a second identical re-print in 1965). Therefore, this 2nd American edition of the Floyd Clymer publication of 'Tuning for Speed' includes all of that valuable 'dated information' that was deleted from the later editions and is identical in all respects to the 294 page 1963/1965 revised and expanded 4th UK edition - with the exception that 7 pages of UK-based advertising to the rear of the book are not included in the Clymer publication.

Despite being one of the most successful motorcycles of all time, the Royal Enfield Bullet has had a very chequered history. Its story begins in the 1930s and by the 1950s it was at the height of its popularity in post-War Britain. Then it became a stalwart of the Indian Army and manufacture transitioned from Britain to India. The near-collapse of the Royal Enfield marque in the 1990s almost meant the end of this classic motorbike, but with the involvement of the Eicher Group from 2001 onwards, the updated Bullet generated new interest and renewed its original commercial success, just like a phoenix rising from the ashes. With over 200 photographs, this book describes the origins of the Royal Enfield company and the pre-war Bullets from 1932 and the relaunch of the Bullet in 1949 with its radical swinging-arm frame. Derivative models such as the 350 and 500, as well as those for competition and road are covered as well as specials such as diesels, V-twins, Egli and big-bore Bullets. The development story behind the lean-burn, electric-start and 5-speed updates is discussed as well as the UCE - the all-new Bullet from 2008 and the Classic and its design story. Finally, the evolution beyond the Bullet is covered which includes the Continental GT and Himalyan 650 twins.
