Many teachers in regular classrooms feel unprepared to teach students with learning disabilities. Fortunately, brain research has confirmed that strategies benefiting learners with special challenges are suited for engaging and stimulating all learners. In this book, neurologist and classroom teacher Judy Willis explains that we can best help students by putting in place strategies, accommodations, and interventions that provide developmentally and academically appropriate challenges to suit the needs, gifts, and goals of each student. *Brain-Friendly Strategies for the Inclusion Classroom* will help teachers

- * Understand how the brain learns and the technologies that reveal this process.
- * Implement strategies that are compatible with students' individual learning styles and honor their multiple intelligences.
- * Improve the focus of students with attention disorders and help them gain the confidence and skills they need to develop goal-oriented behaviors.
- * Create an enriching learning environment by incorporating student-centered activities, discovery and hands-on learning experiences, cross-curricular learning, and multisensory lessons.
- * Implement strategic review, study, and test preparation strategies that will allow students to retain information and connect it with future learning.
- * Build safe, supportive classroom communities and raise class awareness and empathy for students with learning disabilities.

It's time for teachers to lower the barriers, not the bar. Using strategies that align with research on how people's brains function, teachers can engage all students as individuals and help them reach their maximum potential with joy and confidence.

Enger/Ross/Bailey: *Concepts in Biology* is a relatively brief introductory general biology text written for students with no previous science background. The authors strive to use the most accessible vocabulary and writing style possible while still maintaining scientific accuracy. The text covers all the main areas of study in biology from cells through ecosystems. Evolution and ecology coverage are combined in Part Four to emphasize the relationship between these two main subject areas. The new, 13th edition is the latest and most exciting revision of a respected introductory biology text written by authors who know how to reach students through engaging writing, interesting issues and applications, and accessible level. Instructors will appreciate the book's scientific accuracy, complete coverage and extensive supplement package.

In the *Writing & Speaking Assessment Booklet* there are 12 sample answers for the Writing paper (one to correspond to each unit of the Student's Book), written by real FCE students. For each sample answer, there are notes that explain what students need to do in the task, and how the answer would be assessed by a Cambridge ESOL examiner. This booklet also includes a DVD of real FCE students taking the Speaking test, with comments from experienced examiners, so you can see exactly how this part of the test works, and understand how to accurately assess your students. The material on the DVD is supported with photocopiable worksheets, useful phrases, tips and examiner's questions in the booklet. The *Using a dictionary for exams booklet* is full of ideas for using dictionaries to improve your students' language skills and performance in the exam. These ideas are followed by photocopiable worksheets so your students can put what they've learnt into practice. This booklet has been updated to reflect changes in the new Student's Book. In the *Teacher's Book*, there are 12 Unit and four Progress Tests, all with answer keys. The tests are photocopiable for use in class.
