20+ The Kidney Stones Handbook A Patients Guide To Hope ...

Kidney stones can develop in 1 or both kidneys and most often affect people aged 30 to 60. They're quite common, with more than 1 in 10 people affected. Kidney stones are usually found in the kidneys or in the ureter, the tube that connects the kidneys to your bladder. They can be extremely painful, and can lead to kidney infections or the kidney not working properly if left untreated.

Kidney stones - NHS

A kidney stone that blocks the ureter, the tube that connects your kidney to your bladder, can cause a kidney infection. This is because waste products are unable to pass the blockage, which may cause a build-up of bacteria. The symptoms of a kidney infection are similar to symptoms of kidney stones, but may also include: a high temperature
