Some enteric protozoa, such as Giardia and Cryptosporidium, are pathogenic and have been associated with drinking water related outbreaks. They may be found in water following direct or indirect contamination by the faeces of humans or other animals.

[Enteric Protozoa: Giardia and Cryptosporidium](#)

Giardia duodenalis is a protozoan flagellate (Diplomonadida). This protozoan was initially named Cercomonas intestinalis by Lambl in 1859. It was renamed Giardia lamblia by Stiles in 1915 in honor of Professor A. Giard of Paris and Dr. F. Lambl of Prague. However, many consider the name, Giardia duodenalis, (Davaine 1875) to be the correct taxonomic name for this protozoan.

Could these protozoa be causing my symptoms? No. These nonpathogenic protozoa do not cause illness. Other possible causes of your symptoms should be considered. To see whether you are infected with a pathogen (a disease-causing agent), your health care provider might want to check your stool for bacteria, viruses, or other parasites.

[CDC - Nonpathogenic \(Harmless\) Intestinal Protozoa ...](#)

The Pathogenic Enteric Protozoa: Giardia, Entamoeba, Cryptosporidium and Cyclospora compromise the health of millions of people, largely from developing nations. These protozoan parasitic agents contribute significantly to the staggering caseload of diarrheal disease morbidity encountered in developing world nations.
