The Variation of Animals and Plants Under Domestication ...

An animal or a plant may thus slowly become related in its structure and habits in the most intricate manner to many other animals and plants, and to the physical conditions of its home. Variations in the organization will in some cases be aided by habit, or by the use and disuse of parts, and they will be governed by the direct action

Darwin Online: Variation under Domestication

In the broadest sense, animals can be classified as either vertebrates or invertebrates. However, if we look in more detail, we can separate vertebrates into reptiles, fish, amphibians, birds and mammals. With invertebrates, the main animal class is arthropods, which can be split into arachnids, crustaceans, insects and myriapods.

THE VARIATION OF ANIMALS AND PLANTS UNDER DOMESTICATION. INTRODUCTION. THE object of this work is not to describe all the many races of animals which have been domesticated by man, and of the plants which have been cultivated by him; even if I possessed the requisite knowledge, so gigantic an undertaking

VARIATION OF ANIMALS AND PLANTS - ESP

Pigeons as a window into variation. Darwin homed in on pigeons as a prime example of the processes of speciation and of the extent of variation among domestic species. He included a chapter on pigeons in *On the Origin of Species*, and two chapters on pigeons in *The Variation of Plants and Animals Under Domestication*. From his correspondence on the subject, we learn that Darwin himself bred pigeons in an effort to understand the process and the extent of variation under domestication.
