The Globus Toolkit is a key technology in Grid Computing, the exciting new computing paradigm that allows users to share processing power, data, storage, and other computing resources across institutional and geographic boundaries. Globus Toolkit 4: Programming Java Services provides an introduction to the latest version of this widely acclaimed toolkit. Based on the popular web-based The Globus Toolkit 4 Programmer's Tutorial, this book far surpasses that document, providing greater detail, quick reference appendices, and many additional examples. If you're making the leap into Grid Computing using the Globus Toolkit, you'll want Globus Toolkit 4: Programming Java Services at your side as you take your first steps. Written for newcomers to Globus Toolkit, but filled with useful information for experienced users. Clearly situates Globus application development within the context of Web Services and

evolving Grid standards. Provides detailed coverage of Web Services programming with the Globus Toolkit's Java WS Core component. Covers basic aspects of developing secure services using the Grid Security Infrastructure (GSI). Uses simple, didactic examples throughout the book, but also includes a more elaborate example, the FileBuy application, that showcases common design patterns found in Globus applications. Concludes with useful reference appendices.

Learning to argue and persuade in a highly competitive environment is only one aspect of life on a high-school debate team. Teenage debaters also participate in a distinct cultural world--complete with its own jargon and status system--in which they must negotiate complicated relationships with teammates, competitors, coaches, and parents as well as classmates outside the debating circuit. In *Gifted Tongues*, Gary Alan Fine offers a rich description of this world as a testing ground for both intellectual and emotional development, while seeking to understand adolescents as social actors. Considering the benefits and drawbacks of the debating experience, he also recommends ways of reshaping programs so that more high schools can use them to boost academic performance and foster specific skills in citizenship. Fine analyzes the training of debaters in rapid-fire speech, rules of logical argumentation, and the strategic use of evidence, and how this training instills the core values of such American institutions as law and politics. Debates, however, sometimes veer quickly from fine displays of logic to acts of immaturity--a reflection of the tensions experienced by young people learning to think as adults. Fine contributes to our understanding of teenage years by encouraging us not to view them as a distinct stage of development but rather a time in which young people draw from a toolkit of both childlike and adult behaviors. A well-designed debate program, he concludes, nurtures the intellect while providing a setting in which teens learn to make better behavioral choices, ones that will shape relationships in their personal, professional, and civic lives.

With classroom-tested ideas, real-world examples, and easy-to-use activities, Giselle Martin-Kniep and Joanne Picone-Zocchia tap three decades of experience to define and describe critical teaching and learning strategies that engage students and increase achievement. Teachers at any grade level and in any subject area will gain insights into how to \* Create a rigorous, relevant, and authentic curriculum; \* Use organizing centers and make meaningful connections to lend true coherence to subject matter; \* Ask students questions that will help them retain new material and apply their knowledge in settings outside school; \* Teach students how to develop high-order skills such as an ability to affirm values, articulate beliefs, and use multiple resources in varied contexts; \* Use assessment as a system to directly engage students in revising tests and evaluating themselves; \* Incorporate evaluation tools like portfolios, checklists, and rubrics to foster and assess high-quality student work that exceeds expectations; and \* Encourage students to self-monitor progress, self-regulate behavior, appreciate unique learning preferences, and, ultimately, become informed and active 21st century citizens. *Changing the Way You Teach, Improving the Way Students Learn* stresses

the need to build students' capacity to learn how to learn and be strategic, self-aware participants in an ever-complex and fast-changing society. Embracing what they call our "moral imperative," the authors encourage us to help students "pursue the goals that will make them feel whole as human beings."

Annotation Creating video game environments similar to the best 3D games on the market is now within the capability of hobbyists for the first time, with the free availability of game development software such as Unity 3D, and the ease with which groups of enthusiasts can get together to pool their skills for a game project. The sheer number of these independent game projects springing up means there is a constant need for game art, the physical 3D environment and objects that inhabit these game worlds. Now thanks to Google there is an easy, fun way to create professional game art, levels and props. Google SketchUp is the natural choice for beginners to game design. This book provides you with the workflow to quickly build realistic 3D environments, levels, and props to fill your game world. In simple steps you will model terrain, buildings, vehicles, and much more. Google SketchUp is the ideal entry level modeling tool for game design, allowing you to take digital photographs and turn them into 3D objects for quick, fun, game creation. SketchUp for Game Design takes you through the modeling of a game level with SketchUp and Unity 3D, complete with all game art, textures and props. You will learn how to create cars, buildings, terrain, tools and standard level props such as barrels, fencing and wooden pallets. You will set up your game level in Unity 3D to create a fully functional first person walk-around level to email to your friends or future employers. When you have completed the projects in this book, you will be comfortable creating 3D worlds, whether for games, visualization, or films.

This companion (foundational) book to the six-book series, Academic Language Demands for Language Learners: From Text to Context, encapsulates the broad ideas of the series by presenting the evolving theory behind the construct of academic language, a definition and examples of each of its components, and a template for direct classroom applicability. Each of the six books in the series is a more detailed, comprehensive treatment of text-based academic language at each grade level and describes the process by which teachers can incorporate academic language into their instructional assessment practices. This foundations book is suitable for use with any (or all) of the six volumes or can be used separately.

The book presents research work on face recognition using edge information as features for face recognition with ICA algorithms. The independent components are extracted from edge information. These independent components are used with classifiers to match the facial images for recognition purpose. In their study, authors have explored Canny and LOG edge detectors as standard edge detection methods. Oriented Laplacian of Gaussian (OLOG) method is explored to extract the edge information with different orientations of Laplacian pyramid. Multiscale wavelet model for edge detection is also proposed to extract edge information. The book provides insights for advance research work in the area of image processing and biometrics.

"Cellular processes, signaled by UV radiation, contribute to the behavior of plants under various and different stresses in the environment. The importance of the free radical, nitric oxide (NO) was identified as a key early signal in this process. Stress-induced NO can be protective, produce physiological disorders, DNA damage, and programmed cell death (apoptosis). This volume is divided into three parts; (I) Instrumentation and Ecological Aspects;

which evaluates case histories and introduces new instruments for the non-invasive sensing and imaging of UV-stress-related damage in vegetation. (II) Effects of UV Radiation, Nitric oxide and Plant stress; this identifies the cell biological hazards of UV radiation coupled to other environmental stresses, and (III) Plant Stress and Programmed Cell Death; Examining how UV light may relate to the production of NO by plants in terms of DNA damage, error-prone repair cell cycles, and the multiple mechanisms of programmed cell death. The main aim in this publication is to introduce new theoretical developments and instrumentation for cell biology, to update our understanding of the effects of UV radiation and to evaluate how plants use UV signals to protect against damage and enhance their productivity."
